Research Topic : A Reliable Reverse Routing In Core Assisted Mesh Protocols (CAMP).

Synopsis : Topic of Research Colloquium is a Reliable Reverse Routing in CAMP. In this presentation, he discussed about CAMP consists of the maintenance of multicast meshes and loop-free packet forwarding over such meshes. Within the multicast mesh of a group, packets from any source in the group are forwarded along the reverse shortest path to the source, just as in traditional multicast protocols based on source-based trees. The presentation gave an overview of CAMP. The proposed model is much useful for CAMP in Adhoc networks.
