SRI CHANDRASEKHARENDRA SARASWATHI VISWA

MAHAVIDYALAYA

(University established under section 3of UGC Act 1956) (Accredited with 'A' Grade by NAAC)

CURRICULUM FOR FULL TIME ELECTRONICS AND COMMUNICATION ENGINEERING

(Applicable for the Students admitted from 2023-24 onwards)

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

DEPARTMENT VISION AND MISSION

VISION

To emerge as a centre of excellence in the field of Electronics and Communication Engineering for producing talented engineers by imparting quality education, innovation, research and Indian values towards growth and development of the society.

MISSION

- To provide essential knowledge and skills to the students for enhancing employable potential to compete globally.
- To establish state of art laboratories for fostering innovation and research in the emerging fields.
- To establish a centre of excellence in collaboration with industries, research laboratories and other organizations to meet the changing needs of society.
- ◆ To develop ethical integrity among the students for facing the real life challenges.
- To promote curricular and co-curricular activities among the students for instilling social responsibility, creativity and entrepreneurship.

Curriculum (2023-24) B.E. (Electronics and Communication Engineering)

Program Outcomes (POs)

1. Engineering knowledge:

Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. Problem analysis:

Identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. Design/development of solutions:

Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. Conduct investigations of complex problems:

Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. Modern tool usage:

Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. The engineer and society:

Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and sustainability:

Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. Ethics:

Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. Individual and team work:

Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. Communication:

Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project management and finance:

Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

Curriculum (2023-24) B.E. (Electronics and Communication Engineering)

12. Life-long learning:

Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Professional Educational Objectives (PEOs) for B.E (ECE):

PEO 1: Core Competence

To produce graduates with an understanding of fundamentals and applications of Electronics and Communication Engineering.

PEO 2: Professional Development

To instill students with engineering breadth to create, innovate and contribute effective solutions for multidisciplinary real-life problems.

PEO 3: Learning Attitude

To augment the ability and attitude to adapt towards the growth of technology and social challenges.

PEO 4: Professionalism

To inculcate in students, professional and ethical attitude with spiritual exposure, effective communication skills and teamwork to become a successful professional.

DEFINITION OF CREDIT:

No of hours per week	No of credits
1 Hr. Lecture (L) per week	1
1 Hr. Tutorial (T) per week	1
1 Hr. Practical (P) per week	0.5

COURSE CODE AND DEFINITION:

COURSE CODE	DEFINITIONS
L	Lecture
Т	Tutorial
Р	Practical
BSC	Basic Science Courses
ESC	Engineering Science Courses
HSMC	Humanities / Social Sciences / Management Courses
PCC	Programme Core Courses
PEC	Professional Elective Courses
OEC	Open Elective Courses
LC	Laboratory Course
MC	Mandatory Courses
PIIC	Project / Industrial Practice / Internship

CREDIT DISTRIBUTION:

SL.NO	CATEGORY	CREDITS
1.	Basic Science Courses (BSC)	29
2.	Engineering Science Courses (ESC)	20
3.	Programme Core Courses (PCC)	75
4.	Professional Elective Courses (PEC)	21
5.	Humanities / Social Sciences / Management Courses (HSMC)	06
6.	Project / Industrial Practice / Internship (PIIC)	12
7.	Open Elective Courses (OEC)	09
8.	Mandatory Course (MC) *	14*
	Total Credits	172

• Not calculated for CGPA

Curriculum (2023-24)

B.E. (Electronics and Communication Engineering)

CURRICULUM FOR FULL TIME BE (ECE) REGULATIONS

(For candidates admitted during the year 2023-24 onwards)

Curriculum (2023-24) B.E. (Electronics and Communication Engineering)

VALUE ADDED COURSES

The ever-changing global scenario makes the world more competitive and requires high levels of lateral thinking and the spirit of entrepreneurship to cope up with the emerging challenges. Many a times, the defined skill sets that are being imparted to students today with Programme Specific Objectives in educational institutions become redundant sooner than later due to rapid technological advancements. These courses supplement the curriculum to make students better prepared to meet the industrial demands as well as to develop their own interests and aptitudes.

The number of hours will be 30 hours per course and the certificate shall be awarded by the department.

Objectives:

- ✤ To improve employability skills of students.
- ✤ To bridge the skill gaps and make students industry ready.
- ✤ To provide students an understanding of the expectations of industry.
- ✤ To cast students as job providers rather than job seekers.
- ✤ To provide an opportunity to students to develop inter-disciplinary skills.

List of Courses Offered:

S.No	Course Name									
1.	HANDS ON TRAINING ON "DIGITAL IMAGE PROCESSING AND									
1.	MACHINE LEARNING APPLICATIONS"									
2.	REAL TIME APPLICATIONS USING MATLAB/PYTHON/R STUDIO									
3.	CONSUMER ELECTRONICS FOR SMART HOME AUTOMATION									
4.	PCB DESIGN AND FABRICATION									
5.	WEARABLE ELECTRONICS IN HEALTHCARE									
6.	ROBOTICS USING ARDUINO FOR AUTOMATION									
7.	SERVICING OF ELECTRONIC GADGETS

UNIT-I

SEQUENCESAND SERIES

Convergence of sequence and series -Tests for convergence -Comparison,-Ratio- Cauchy's Root-Raabe's test-logarithmic test- Fourier series: Half range sine and cosine series-Parseval's theorem.

UNIT-II DIFFERENTIAL EQUATIONS

Second order linear differential equations with constant coefficients–Cauch Euler equation, Legendre equation-Method of variation of parameters-First order partial differential equations: Formation of PDE -solutions of first order linear PDEs.

UNIT-III CALCULUS

Evaluation of definite integral-Applications of definite integrals- To evaluate surface areas and volumes of revolutions; Beta and Gamma functions and their properties.

UNIT-IV MULTIVARIABLE CALCULUS

Multiple Integration-double and triple integrals (Cartesian and polar)-change of order of integration in double integrals-Change of variables(Cartesian and polar) Applications - areas and volumes by double integration-Center of mass and Gravity (constant and variable densities).

UNIT-V NUMERICAL METHODS

Solution of polynomial and transcendental equations–Bisection method-Newton-Raphson method-Regula-Falsi method- Finite differences-Interpolation using Newton's forward and backward difference formulae- Central difference interpolation-Gauss's forward and backward formulae.

Total Hours 60 Hours

Course Name	ENGINEERING PHYSICS	3	0	0	3	40	60	100
Course	BASIC SCIENCE COURSE	Syllabus Revision						V.1.0
Category								
Pre-requisite							•	

Course Objectives:

The course should enable the students -

- 1. Theory of Interference-Newton strings, Michelson Interferometer and Fresnel and Fraunhoffer diffraction, Diffraction due to "n" slits Plane Transmission grating.
- 2. Energy distribution in black body Planck's law, De Broglie matter waves dual nature and expression, Schrodinger Time Independent and Dependent, wave equation, Expression for particle in1-D box and applications.
- Laser Principles and Properties, Einstein's theory, Types of lasers Nd: YAG and CO2 laser Applications of lasers – IR Thermograph, Optical fibers-Types of optical fibers, Acceptance angle and numerical aperture, Fiber losses, Applications in engineering and medicine.
- 4. PN Junction diode and Zener diode V-I characteristics, BJT, SCR, FET, D-MOSFET, E-MOSFET Characteristics, Characteristics of CMOS, Logic Gates and Universal Building Blocks.
- 5. Fundamentals of dielectric materials, Internal field and Clausius Mossotti relation, Super conductors–properties and types BCS theory, Nano materials Synthesis, Ball milling and PVD method.Principle and properties of SMA and Biomaterials.

Course Outcomes:

On completion of the course, the student will be able to

Course	Description	Highest Bloom's
Outcom		Taxonomy
es		
CO1	To develop an understanding of the principles of optics.	K2
CO2	Experience the diverse applications of the wave equation. Learn	K4
	the mathematical tools needed to solve quantum Mechanics	
	problems.	
CO3	To provide adequate knowledge on laser fundamentals types and	K2
	applications and to expose the basics of signal propagation	
	through	
	fiber optics	
CO4	Understand the principles and concepts of semiconductor Physics.	K2
	Understand and utilize the mathematical models of Semi conductor	
	junctions and MOS transistors for circuits and systems.	
CO5	Acquire basic knowledge on various newly developed smart	K2
	materials.

Syllabus (2023-24)

B.E. (Electronics and Communication Engineering)

- 5. Determination of Velocity of sound waves in liquid using Ultrasonic interferometer.
- 6. Determination of wavelength of prominent colours of mercury spectrum using grating.

7. Determination of number of lines per meter of the grating using normal incidence method.

- 8. Determination of refractive index of the given prism using minimum deviation method.
- 9. Determination of emissivity of the surface of a black body.
- 10. Basic logic gates- Verification of truth tables
- 11. NAND-Universal building block
- 12. NOR-Universal building block
- 13. Zener diode- I-V characteristics
- 14. Study of LCR circuit

Text	Book(s)
1.	Practical Physics - Ouseph and Rangarajan.
2.	Engineering Practical Physics-K. Srinivasan.
3.	Engineering Practical Physics - M.N. Avadhanulu.

LIST OF EXPERIMENT	'S
1. Basic programs in data	ypes.
2. Evaluate Expressions us	sing library Function.
a. πr^2	
b. (A+B+(2C/3A)+A2+	-2B)
c. $\sqrt{S(S-A)(S-B)(S-C)}$	
d. LOG $(x^3+y^3+z^3)$	
3. Problems in Decision m	aking statements.
i. Find the Biggest amo	ng 3 numbers.
ii. Find Even or odd	
iii. Arithmetic operation	s using Switch - Case Statements.
4. Problems in looping sta	tements.
i. Find the Sum of digit	s using (i) For loop (ii) While loop
ii. Generate the Fibonac	ci series
iii. Check whether the m	umber is prime or not.
5. Find the Linear Search.	
6. General sorting.	
7. Matrix Manipulation-A	ddition, Subtraction and Multiplication.
8. String operations-string	copy, string reverse, string concatenate.
9. Swapping of numbers u	sing call by value, call by reference.
10. Find factorial using recu	rsive functions.
11. Numerical methods-Qua	adratic Equation.
12. Display the student info	rmation & marks using Structure & Unions.
13. Demonstrate array of st	ructures.
14. Pointer Arithmetic and	Array access using Pointers.
15. Basic File Operations	
	45 Hour

UNIT-I MATRICES

Rank of a matrix, System of linear equations; Symmetric, skew-symmetric and orthogonal matrices; Eigen values and eigenvectors; Diagonaization of matrices; Cayley-Hamilton theorem, Orthogonal transformation and quadratic to canonical forms.

UNIT-II	NUMERICAL METHODS

Ordinary differential equations: Taylor's series, Euler and modified Euler's methods. Runge- Kutta method of fourth order for solving first order equations. Milne's predicator corrector methods. Partial differential equations: Finite difference solution two dimensional Laplace equation and Poisson equation, Implicit and explicit methods for one dimensional heat equation (Bender-Schmidt and Crank-Nicholson methods), Finite difference explicit method for wave equation

UNIT-III **TRANSFORM CALCULUS-I**

Laplace Transforms : Definition, Properties of Laplace transforms: Linearity Property, First shifting property, Change of scale property – Transforms of derivatives - Transforms of integrals -Multiplication by tⁿ - Division by t - Evaluation of integrals by Laplace transform - Inverse transforms: Method of partial fractions – Other methods of finding inverse - Convolution theorem (Without proof) Application to differential equations.

TRANSFORM CALCULUS- II UNIT-IV

Fourier integral theorem (without proof) - Fourier Sine and Cosine integrals - Complex form of Fourier integral - Fourier transform - Fourier sine and Cosine transforms - Properties of Fourier Transforms: Linear property, Change of scale property, Shifting property -Parseval's identity for Fourier transforms (without proof) – Application of transforms to boundary value problems: Heat conduction, Vibrations of a string, Transmission lines.

UNIT-V **TRANSFORM CALCULUS- III**

12 Hours Standard z-transforms of 1.aⁿ pⁿ – Linearity property – Damping rule – Shifting rules -Multiplication by n - Initial and final value theorems (without proof) - inverse z -transforms -Convolution theorem (without proof) - Convergence of z-transforms - Two sided z- transform -Evaluation of inverse z-transforms: Power series method, Partial fraction method, inversion integral method.

atoms- Mosley's law – Modern periodic table - periodic properties: atomic size- ionization energieselectron affinity- electro negativity.

UNIT-II CHEMICAL BONDING

9 Hours

Types of bonds – ionic - covalent – coordinate bond - Molecular Orbital Theory –types of molecular orbitals- energy level diagrams- e⁻ns filling in MO – bond order – MO diagrams of H₂, He₂, N₂, O₂, CO and HF molecules- Metallic bond – band theory of solids (primitive treatment only) and the role of doping on band structures - Hybridization – definition - geometry of the molecules- CH_4 , C_2H_4 , C_2H_2 - Molecular forces-Ionic, dipolar, van der waals interactions.

UNIT-IIITHERMAL AND ELECTROCHEMICAL EQUILIBRIA9 HoursThermodynamic functions: State functions, Path functions, Internal energy, enthalpy, entropy and
free energy-Gibbs Helmholtz equation and its applications .Feasibility of reaction - Ellingham
diagrams.

Types of electrodes- Standard electrodes-Standard hydrogen electrode, standard calomel electrode, Single electrode potential, electrochemical series - galvanic cell - emf - Nernst equation and its applications - Glass electrode, Potentiometric acid base titrations and Solubility equilibrium-Corrosion-types- Chemical corrosion-electrochemical corrosion-factors influencing and control measures.

UNIT-IVSPECTROSCOPIC TECHNIQUES AND APPLICATIONS9 HoursElectromagneticradiations – wavelength – frequency – energy of a radiation -
electromagnetic spectrum – changes brought about by the radiations - components of a
spectrometer – rotational spectra of diatomic molecules – rigid and non-rigid rotor models (energy
expressions only)- selection rule– schematic instrumentation – types of vibrations in molecules
(CO_2 , H_2O) – vibrational spectra (primitive treatment) – selection rule- instrumentation and
applications – electronic transitions – electronic spectra — Beer-Lambert's law- instrumentation
and applications– NMR – principle – chemical shift - instrumentation – NMR spectra of CH₄ –
CH₃OH – xylene isomers – MRI (Introduction only).9 Hours

UNIT-VSTEREOCHEMISTRY & ORGANIC REACTIONS9 HoursStereochemistry - Representation of 3D structures - Fisher projection, Newman and Sawhorse
projection formulae - Ethane, 3-bromo-2-butanol Conformation of Ethane, Butane Ethylene
glycol, , Symmetry and Chirality - Stereo isomers, Enantiomers, Diastereomers. Configuration - R-S
system. Optical activity - Lactic acid, Tartaric acid- Geometrical isomerism - cis-trans& E-Z
notations.Organic reactions - Substitution - S_N^1 & S_N^2 (Simple Example - mechanism not expected)-

electrophilic substitution – $S_N \approx S_N$ (Simple Example – mechanism not expected)– electrophilic substitutions – Friedel Crafts alkylations – Additions – 1,2-addition – types- addition of HX -Elimination – $E^1 \& E^2$ (Examples only, mechanism not expected) – Oxidations – CIShydroxylation with OsO₄, Reductions – Clemmensen&wolff-Kishner reductions, Cyclization – Diels Alder, Ring-Opening – Nylon-6 from caprolactum.

Synthesis of most commonly used drugs – Aspirin, Paracetamol.

Total Hours 45 Hours

UNIT-I Electric:					and C	1) 10-14	-000.01	d aum	ont ac	uroog	Kirah	off ar	rront (

UNIT-II	AC CIRCUITS	9 Hours
Representation	of sinusoidal waveforms, peak and rms values, phasor representation, a	real power,
reactive power	apparent power, power factor. Analysis of single-phase ac circuits consisti	ng of R, L,
C, RL, RC, F	RLC combinations (series and parallel), resonance. Three-phase balance	ed circuits,
voltage and cur	rent relations in star and delta connections.	

UNIT-III TRANSFORMERS

Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Auto-transformer and three-phase transformerconnections.

ELECTRICAL MACHINES UNIT-IV

Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Single-phase induction motor. Construction, working, torque- speed characteristic and speed control of separately excited dc motor. Construction and working of synchronous generators.

POWER CONVERTERS AND ELECTRICAL INSTALLATIONS UNIT-V 9 Hours

DC-DC buck and boost converters, duty ratio control. Single-phase and three-phase voltage source inverters; sinusoidal modulation. Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

> **Total Hours 45 Hours**

concept-Indian environmental movements-environmental calendar.

UNIT-II

ECO SYSTEM AND BIO DIVERSITY

9 Hours

2.1. Ecosystem – structure – functions – simplified ecosystem models (food chain and food webs and their types, energy flow) - forest – grassland – pond –ecosystems – ecological succession – ecological pyramids–Bio-geo chemical cycles of water–oxygen-carbon-phosphorous and sulphur. 2.2.Biodiversity – definition – types – species – genetic and ecosystem diversities-values of biodiversity – threats to biodiversity – conservation of biodiversity – endemism – biodiversity hotspots – Indian biodiversity– endemic species of India–IUCN lists – red – green and blue data books.

UNIT-III

NATURAL RESOURCES

3.1 Natural resources – definition – types – forest resources – uses –deforestation- reasons - effects – water resources – dams – effects of dams - food resources – modern agriculture– ill effects – energy resources -types–hydel–nuclear–solar–wind and biomass energy-world scenario–Indian scenario. 3.2 Population and environment–reasons for over exploitation of resources–population– demography – population curves – population explosion – effects – consumerism – effects – urbanization – reasons and effects – role of an individual.

UNIT-IV E

ENVIRONMENT POLLUTION

9 Hours

9 H o ur s

4.1 Pollution-definition-types-air pollution -causes and effects-effects of CO2-CO - NOx - SOx -particulates-control of air pollution-water pollution-causes-effects-remedies-soil pollution- solid waste management - e-waste - ill effects of e-waste - proper recycling - Noise pollution - reasons-effects - control - nuclear pollution - cases - effects and control -thermal pollution causes - effects and remedies. 4.2 Legal provisions for protecting environment - article 48 A - 51 A (g) - Environment act1986 - Air act 1981 - Water act 1974 - wild life protection act - Forest act 1980 - problems in implementation-reasons.

UNIT-V

SOCIAL ISSUES AND ENVIRONMENTAL ETHICS

9 Hours

Present environmental scenario – green house effect – climate change–The Kyoto Protocol–ozone layer depletion- The Montreal Protocol-acid rain–causes–effects-disparity among the nations– The Copenhagen UNFCCC summit – carbon currency- virtual water- genetically modified organisms, Disaster management. 5.2 Environmental ethics–introduction–people getting affected-resettlement and rehabilitation – issues involved –Sardhar Sarovar project – Tawa Matsya sang - Melting icebergs of Arctic.

Total Hours 45 Hours

Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing;. Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modeling; Solid Modeling; Introduction to Building Information Modeling (BIM).

(Except the basic essential concepts, most of the teaching part can happen Concurrently in the laboratory)

Module 1: Introduction to Engineering Drawing covering, Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General method only); Cycloid, Epicycloids, Hypocycloid and In volute; Scales – Plain, Diagonal and Vernier Scales

Module 2: Orthographic Projections covering, Principles of Orthographic Projections- Conventions - Projections of Points and lines inclined to both planes; Projections of planes inclined Planes -Auxiliary Planes

Module 3: Projections of Regular Solids covering, those inclined to both the Planes- Auxiliary Views; Draw simple annotation, dimensioning and scale. Floor plans that include: windows, doors, and fixtures such as WC, bath, sink, shower, etc.

Module 4:Sections and Sectional Views of Right Angular Solids covering, Prism, Cylinder, Pyramid, Cone - Auxiliary Views; Development of surfaces of Right Regular Solids, Prism, Pyramid, Cylinder and Cone; Draw the sectional orthographic views of geometrical solids, objects from industry and dwellings (foundation to slab only)

Module 5: Isometric Projections covering, Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions.

Module 6: Overview of Computer Graphics covering, listing the computer technologies that impact on graphical communication, Demonstrating knowledge of the theory of CAD software [such as: The Menu System, Toolbars (Standard, Object Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), The Command Line (where applicable), The Status Bar, Different methods of zoom as used in CAD, Select and erase objects.; Isometric Views of lines, Planes, Simple and compound Solids]

Module 7: Customization & CAD Drawing consisting of set up of the drawing page and the printer, including scale settings, Setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles

Module 8: Annotations, layering & other functions covering applying dimensions to objects, applying annotations to drawings; Setting up and use of Layers, layers to create drawings, Create, edit and use customized layers; Changing line lengths through modifying existing lines (extend/lengthen); Printing documents to paper using the print command; orthographic projection techniques; Drawing

sectional views of composite right regular geometric solids and project the true shape of the sectioned surface; Drawing annotation, Computer-aided design (CAD) software modeling of parts and assemblies. Parametric and non-parametric solid, surface, and wireframe models. Part editing and two-dimensional documentation of models. Planar projection theory, including sketching of perspective, isometric, multi view, auxiliary, and section views. Spatial visualization exercises. Dimensioning guidelines, tolerance techniques; dimensioning and scale multi views of dwelling

Module 9: Demonstration of a simple team design project that illustrates Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids; meshed topologies for engineering analysis and tool-path generation for component manufacture; geometric dimensioning and tolerancing; Use of solid-modeling software for creating associative models at the component and assembly levels; floor plans that include: windows, doors, and fixtures such as WC, bath, sink, shower, etc. Applying color coding according to building drawing practice; Drawing sectional elevation showing foundation to ceiling; Introduction to Building Information Modeling (BIM).

1.

Syllabus (2023-24)

B.E. (Electronics and Communication Engineering)

	8. Potentiometry -Determination of formal redox potential of Fe ³⁺ /Fe ²⁺ couple
	9. Synthesis of Nylon 66 by interfacial polymerization method.
	10. Determination of Saponification/acid value of oil.
	11. Systematic qualitative analysis of a salt
	12. Lattice structures and packing of spheres
	13. Models of potential energy surfaces – computational experiment.
	14. Chemical oscillations- Potentiometric study of the oscillations of Belousov-
	Zhabotinskyreaction
	15. Determination of the partition coefficient of I_2 between water and CCl_4
	16. Verification of Freundlich isotherm for adsorption of acetic acid / oxalic acid by
	charcoal.
	17. Determination of iso electric point of Gelatin sols by using capillary viscosmeter.
	Total Hours 45 Hours

List of Experiments
1. Study of Electric Motors (AC & DC Motors)
2. Load Test on Single Phase Induction Motor
3. Load Test on Three Phase Induction Motor
4. Load Test on Single Phase Transformer
5. Load Test on Three Phase Alternator
6. Speed Control of DC Motor
7. Speed Control of Three Phase Induction Motor (Pole Changing Method)
8. Study of Multi meter, CRO and LCR Meter
9. Measurement of Voltage, Current and Power.
10. Verification of Kirchoff's Law
11. Verification of Thevenin's Theorem
12. B·H Curve of a Magnetic Material
13. Rectifier Circuit Analysis (AC – DC)
14. Inverter Circuit Analysis (DC – AC)
15. Chopper Circuit Analysis (DC – DC)
16. Series and Parallel RLC Circuit Analysis
 Total Hours 45 Hours

SEMESTER - III

Course Code	BECF183T10	L	Т	Р	C	IA	EA	ТМ
Course Name	MATHEMATICS III (PROBABILITY AND STATISTICS)	3	1	0	4	40	60	100
Course Category	BASIC SCIENCE COURSE		Sylla	bus Re	visio	1	Ι	7.1.0
Pre-requisite	Collection of data, Counting T	'echni	ques,]	Permut	ation	and co	ombina	ation

Course Objectives:

The course should enable the students

- 1. To give the basic knowledge about the probability and random variables.
- 2. Understand about the discrete and continuous distributions
- 3. To find the measures of basic statistics like central tendency, dispersion, correlation and regression.
- 4. To fit the different types of curves for the given set of tabular values.
- 5. Distinguish between the parametric and non-parametric tests.

Course Outcomes:

On completion of the course, the student will be able to

On completi	on or	the co	burse,	the sti	udent	WIII D	e able	to							
Course						De	script	ion						Hig	hest

UNIT-I	MINIMIZATION TECHNIQUES AND LOGIC GATES	9 Hours
Minimization	Techniques: Boolean postulates and laws - De-Morgan's Theorem	1 - Principle of
Duality - Bo	olean expression - Minimization of Boolean expressions - Mintern	m – Maxterm -
Sum of Prod	ucts (SOP) - Product of Sums (POS) - Karnaugh map Minimizatio	on – Don't care
conditions –Q	Quine- McCluskey method of minimization.	
Logic Gate	s: AND, OR, NOT, NAND, NOR, Exclusive-OR and H	Exclusive–NOR
Implementati	ons of Logic Functions using gates, NAND -NOR implementations -	Multilevel gate
implementati	ons- Multi output gate implementations. TTL and CMOS Lo	ogic and their
characteristic	s – Tristate gates.	
UNIT-II	COMBINATIONAL CIRCUITS	9 Hours

Design procedure – Half adder – Full Adder – Half subtractor – Full subtractor – Parallel binary adder, parallel binary Subtractor – Fast Adder - Carry Look Ahead adder – Serial Adder/Subtractor - BCD adder – Binary Multiplier – Binary Divider - Multiplexer/ Demultiplexer - decoder - encoder – parity checker – parity generators – code converters -Magnitude Comparator.

UNIT-III SEQUENTIAL CIRCUITS

Latches, Flip-flops - SR, JK, D, T, and Master-Slave – Characteristic table and equation – Application table – Edge triggering – Level Triggering – Realization of one flip flop using other flip flops – serial adder/subtractor Asynchronous Ripple or serial counter – Asynchronous Up/Down counter - Synchronous counters – Synchronous Up/Down counters – Programmable counters – Design of Synchronous counters: state diagram- State table –State minimization –State assignment -Excitation table and maps-Circuit implementation - Modulo–n counter, Registers – shift registers - Universal shift registers – Shift register counters – Ring counter – Shift counters -Sequence generators.

UNIT-IV MEMORY DEVICES

9 Hours

9 Hours

Classification of memories – ROM - ROM organization - PROM – EPROM – EEPROM – EAPROM, RAM – RAM organization – Write operation – Read operation – Memory cycle -Timing wave forms – Memory decoding – memory expansion – Static RAM Cell- Bipolar RAM cell – MOSFET RAM cell – Dynamic RAM cell –Programmable Logic Devices – Programmable Logic Array (PLA) - Programmable Array Logic (PAL) – Field Programmable Gate Arrays (FPGA) - Implementation of combinational logic circuits using ROM, PLA, PAL

UNIT-V	SYNCHRONOUS	AND	ASYNCHRONOUS	SEQUENTIAL	9 Hours
	CIRCUITS				

Synchronous Sequential Circuits: General Model – Classification – Design – Use of Algorithmic State Machine – Analysis of Synchronous Sequential Circuits Asynchronous Sequential Circuits: Design of fundamental mode and pulse mode circuits –

Incompletely specified State Machines – Problems in Asynchronous Circuits – Design of

Haza	rd Free Switching circuits. Design of Combinational and Sequential circuits using

Course Name	SIGNALS AND SYSTEMS	3	0	0	3	40	60	100
Course	PROGRAMME CORE		Sylla	bus Rev	visior	1		V.1.0
Category	COURSE							
Pre-requisite	CBSMAF8T10 - Mathematics -	– II						

Course Objectives:

The course should enable the students -

- 1. To understand the properties and representation of discrete and continuous signals.
- 2. To analyze continuous time signals and system in the Fourier and Laplace domain.
- 3. To analyze discrete time signals and system in the Fourier and Z transform domain.
- 4. To development of the mathematical skills to solve problems involving convolution, filtering, modulation and sampling.

Course Outcomes:

On completion of the course, the student will be able to

Course	Description	Highest Bloom's
Outcom		Taxonomy
es		
CO1	Understand and classify systems based on the impulse response	K2
	behavior of both continuous-time and discrete-time systems.	
CO2	Analyze and Evaluate the mathematical modeling of various signals	K4
	and systems.	
CO3	Analyze the Continuous time signals using Fourier series and	K3
	Fourier Transforms.	
CO4	Examine the Continuous time LTI systems using Fourier series and	K5
	Fourier Transforms.	
CO5	Analyze sampling process and sampling of discrete time signals.	K3

9 Hours UNIT-III ARRAYS Defining & accessing Array elements, arrays as class member data, array of Objects. Operator Overloading: Overloading Unary Operators, Operator Arguments, Return Values, nameless Temporary objects, postfix notations. Overloading Binary Operators - Arithmetic operators, Concatenating Strings, Multiple overloading Comparison operators, Arithmetic Assignment Operators.

UNIT-IV	INHERITANCE-DERIVED CLASS AND BASE CLASS	9 Hours
Derived class	constructors, overriding member functions, Class Hierarchies, Abstract	base class,
Public and pri	vate inheritance, Levels of inheritance, Multiple inheritance. Memory man	agement –

agement – new and delete operator, a string class using new, Pointers to Objects -Referring to Members, another Approach to new, An array of pointers to Objects.

#### VIRTUAL FUNCTIONS UNIT-V

Virtual function, Late Binding, Abstract Classes, Pure virtual functions, Friend Functions-, Friends for functional Notation. Friend Classes -Static Functions, investigating destructors. Assignment and copy-initialization-overloading the assignment operator, the copy constructor ,this pointer. Templates, function template, class template.

Total Hours

1.	Object Oriented Programming in Microsoft C++ - Robert Lafore, Galgotia Publications 1998.
2.	Let us C++ - Yaswant Kanitkar, 2000.

#### **Reference Book(s)**

**Text Book(s)** 

1. Object Oriented Programming in C++ - C. Balagurusamy, Tata McGraw Hill, 2002.

Characteristics of object oriented language - objects, classes, Inheritance, Reusability, creating new data types, Polymorphism and overloading. C++ programming basis – Data types, Manipulators,

A simple class, C++ Objects as physical Objects, C++ Objects as Data Types, Constructors,

Cin, Cout, Type conversion, arithmetic operators, Loops and decisions.

outside the class, inline functions, and Returning objects from Functions.

**CLASS AND OBJECTS** 

destructors, objects as function arguments, overloaded constructors, member functions defined

Course Code	BECF183P80	L	Т	P	С	IA	EA	ТМ
Course Name	ELECTRONIC DEVICES	0	0	3	2	40	60	100
	LABORATORY							
Course	PROGRAMME CORE		Syllab	ous Rev	visior	1		V.1.0
Category	COURSE							
Pre-requisite								
Course Objectiv	ves:							
The course shou	ld enable the students							
1 To under	stand various tools used for desig		inanita					

- 1. To understand various tools used for designing circuits.
- 2. To analyze the characteristics of Semiconductor devices.
- 3. To construct semiconductor devices for practical applications.
- 4. To design of amplifiers and analyze their characteristics.
- 5. To analyze the frequency response characteristics of small signal amplifier.
- 6. To enable to students to work in a team and build applications.

#### **Course Outcomes:**

On completion of the course, the student will be able to

Course Outcomes	Description	Highest Bloom's Taxonomy
CO1	Construct and evaluate the Performance characteristics of various semiconductor device.	K2
CO2	Integrate the semiconductor devices for Practical Application.	К3
CO3	Design amplifier circuit and analyze the design of frequency response of the small Signal Amplifier.	К3
CO4	Design various circuits using software tools and integrate and compare the findings in hardware implementation.	K4
CO5	Demonstrate capability to work in a team and to build circuits for various applications.	K4

#### Syllabus (2023-24)

B.E. (Electronics and Communication Engineering)

#### LIST OF EXPERIMENTS

- 1. Illustrate class & objects.
- 2. To demonstrate the use of Switch –Case statement and to perform arithmetic operations.
- 3. To demonstrate the use of constructor types and destructor.
- 4. To demonstrate the use of following
  - i. this pointer
  - ii. inline functions
- 5. To enter the records of n number of students and then display them using nested structure.
- 6. To demonstrate the use of
  - i. Unary operator.
  - ii. Binary operator.
- 7. Illustrate operator overloading.
- 8. To demonstrate the concept of polymorphism applied to the member functions.
- 9. To demonstrate the use of different types of Inheritance.
- 10. To demonstrate the use of Demonstration of New & Delete Operator.
- 11. To demonstrate the Pure Virtual Function.
- 12. To demonstrate the use of Friend Function.
- 13. To demonstrate the use of class template.

#### Total Hours 45 Hours

Text Book(s)

1. Object Oriented Programming in Microsoft C++ - Robert Lafore, Galgotia Publications, 1998.

2. Let us C++ - Yaswant Kanitkar, 2000.

#### **Reference Book(s)**

1. Object Oriented Programming in C++ - C. Balagurusamy, Tata McGraw Hill, 2002.

#### Syllabus (2023-24)

B.E. (Electronics and Communication Engineering)

#### SEMESTER - IV

Course Code	CBSMAJ8T10	L	Т	Р	C	IA	EA	TM
Course Name	MATHEMATICS - IV	3	1	0	4	40	60	100
	(CALCULUS, SPECIAL							
	FUNCTIONS AND DESIGN							
	OF EXPERIMENTS)							
Course Category	BASIC SCIENCE COURSES		Syllab	ous Re	vision	•		V.1.0
	(BSC)							
Pre-requisite	Knowledge of Mathematics – I an	nd Mat	hemat	ics – I	[		•	

#### **Course Objectives:**

The course should enable the students

- 1. To understand the homogeneous functions for two variables and its total derivatives.
- 2. To understand the applications of vector products.
- 3. To analyze the solutions of a differential equation in terms of series.
- 4. To know about the special functions and its properties.
- 5. To investigate the experiments which are in terms of one, two and three factors.

#### **Course Outcomes:**

On completion of the course, the student will be able to

Course Outcomes	Description	Highest Bloom's Taxonomy
C01	Calculate the maximum and minimum values for functions of two variables and aware about the Lagrange multipliers.	К3
CO2	Identify the relation between the line integral, surface integral and volume integral.	K3
CO3	Find the series solution for Bessel function.	К3
CO4	Find the solutions for various problems by using recurrence relations.	К3
CO5	Analyze the various factors and capable to conclude about the decisions.	K4

#### **Correlation between Course Outcomes (COs) and Program Outcomes (POs):**

UNIT-I		AM	PLIFII		ODEL	<i>s</i>								9 Ho	urs
Voltage	amnl						condu	rtance	ampli	ifier a	nd Tra	ns_rec	istanc		

Biasing schemes for BJT and FET amplifiers, Bias stability, Various configurations (CE/CS, CB/CG, CC/CD) and their features, Small signal analysis, Estimation of voltage gain, input resistance, output resistance etc., Low frequency and High frequency transistor models, Design Procedure for particular

specifications, Low frequency analysis of multistage amplifiers.

#### UNIT-II POWER & FEEDBACK AMPLIFIERS

9 Hours

9 Hours

9 Hours

Frequency response of single stage and multistage amplifiers, Cascode amplifier. Various classes of operation (Class A, B, AB, C), their power efficiency and linearity issues - Feedback Topologies: Voltage series, Current series, Voltage shunt, Current shunt, Effect of feedback on gain and bandwidth, Calculation with practical circuits, Concept of stability, gain margin and phase margin.

#### UNIT-IIIOSCILLATORS & DIFFERENTIAL AMPLIFIERS9 Hours

Review of Basic Concept, Barkhausen criterion, RC oscillators (Phase shift, Wien Bridge), LC oscillators (Hartley, Colpitts, Clapp), Non- sinusoidal oscillators. Current mirror: Basic topology and its variants, V-I characteristics, output resistance, minimum sustainable voltage and maximum usable load. Differential amplifier: Basic structure and principle of operation, calculation of differential gain, common mode gain, CMRR and ICMR. OP-AMP design: Design of differential amplifier for a given specification, Designof gain and output stages, compensation.

#### UNIT-IV OP-AMP APPLICATIONS

Review of Inverting and Non-inverting amplifiers, Integrator and differentiator, Summing amplifier, Precision rectifier, Schmitt trigger and its applications- Active filters: Low pass, high pass, band pass and band stop, design guidelines.

#### UNIT-V DAC & ADC

Digital-to-analog converters (DAC): Weighted resistor, R-2R ladder, Resistor string. Analog todigital converters (ADC): Single slope, Dual slope, Successive approximation, Flash type -Switched capacitor circuits: Basic concept, practical configurations, Application in amplifier, integrator, ADC etc.

9 Hours

Core Architecture of the 8086 - Memory Segmentation, Minimum mode Operation and Maximum Mode Operation, Instruction Set of the 8086 processor- Classification - Instruction Format Addressing modes, Simple Assembly Language Programs - Arithmetic operations, Data transfer, String Manipulation, Searching and Sorting.

#### UNIT-III I/O INTERFACING

9 Hours

Memory Interfacing and I/O interfacing - Parallel communication interface – Serial Communication interface – D/A and A/D Interface - Timer – Keyboard /display controller – Interrupt controller – DMA controller – Programming and applications Case studies: Traffic Light control, LED display, LCD display, Keyboard display interface and Alarm Controller.

### UNIT-IV MICROCONTROLLER

9 Hours

9 Hours

Architecture of 8051 – Special Function Registers (SFRs) - I/O Pins Ports and Circuits – Instruction set- Addressing modes - Assembly language programming - Programming 8051 Timers, Serial Port Programming - Interrupts Programming – LCD & Keyboard Interfacing - ADC, DAC & Sensor Interfacing - External Memory Interface- Stepper Motor and Waveform generation.

#### UNIT-V ADVANCED MICROPROCESSOR & MICROCONTROLLER

Advanced Microprocessor Architectures- 286, 486, Pentium - RISC Processors- RISC Vs CISC, RISC properties and evolution- ARM Processor – CPU: programming input and output supervisor mode, exceptions and traps – Co-processors- Memory system mechanisms – CPUperformance- CPU power consumption.

Course Code	BECF186T10	L	Т	Р	С	IA	EA	TM
Course Name	CONTROL SYSTEM	3	0	0	3	40	60	100
Course Category	PROGRAMME CORE COURSE		Syllat	ous Re	vision		1	V.1.0
Pre-requisite	BECF183T60 – Network Theory							

#### **Course Objectives:**

The course should enable the students

- 1. To introduce the elements of control system and various representations.
- 2. To provide knowledge on the time response and stability of systems.
- 3. To introduce the various frequencies response plots and analyzes the stability of systems.
- 4. To introduce state variable representation of physical systems and study the effect of state feedback.
- 5. To design various types of compensators.

#### **Course Outcomes:**

On completion of the course, the student will be able to

Course	Description	Highest
Outcome		Bloom's
S		Taxonomy
CO1	Compute the transfer function of different physical systems.	K3
CO2	Analyze the time domain specifications and calculate the steady state error.	K4
CO3	Illustrate the frequency response characteristics of systems.	K3
CO4	Analyze the state space model of continuous and discrete systems.	K4
CO5	Design compensators that can be used to design control systems with required specifications.	К5

#### **Correlation between Course Outcomes (COs) and Program Outcomes (POs):**

Basic E	lemen	ts of C	Control	Syste	em – C	)pen l	oop ar	nd Clo	sed lo	op sys	tems -	- Diffe	rential	equat	ion -

Transfer function, Modeling of Electric systems, Translational and Rotational mechanical systems – Transfer function – AC & DC Servomotor and Synchros -Block diagram reduction Techniques - Signal flow graph.

#### UNIT-II TIME RESPONSE AND STABILITY ANALYSIS

9 Hours

9 Hours

9 Hours

. - ---

. . . .

Time response analysis - First Order Systems - Impulse and Step Response analysis of Second order systems - Steady state errors- Concepts of Stability-Routh-Hurwitz Criterion-Root Locus Technique-Application of Root Locus Diagram- Relative Stability.

#### UNIT-III FREQUENCY RESPONSE AND STABILITY ANALYSIS 9 Hours

Frequency response – Frequency domain specifications - Correlation between frequency domain and time domain specifications – Stability analysis - Bode plot – Polar plot - Nyquist Stability criterion.

#### UNIT-IV STATE VARIABLE ANALYSIS

State space representation of Continuous Time systems – State equations – Transfer function from State Variable Representation – Solutions of the state equations - Concepts of Controllability and Observability.

UNIT-V

#### **COMPENSATOR DESIGN**

Compensators - Effect of adding poles and zeros - Lag, lead and lag-lead compensators design using Bode plot – Design of State feedback controller - P, PI, PD and PID Controller.

#### UNIT-I

**BASICS OF ELECTROMAGNETICS** 

9 Hours

Vector algebra-Coordinate Systems-Vector differential operator-Gradient-Divergence-Curl-Divergence Theorem-Stokes theorem-Coulombs law-Electric field intensity-Electric flux density-Gauss law and its applications-Biot Savart Law-Ampere's law-Faradays law- Maxwell's Equations in Integral and differential form-Electric and magnetic boundary conditions at the media interface.

#### UNIT-II ELECTROMAGNETIC WAVES

9 Hours

Uniform Plane Waves-Uniform plane wave propagation-Wave propagation in conducting medium-Wave Polarization-Reflection by perfect conductor (normal and oblique incidence)- Reflection by perfect insulator(normal and oblique incidence)-plane waves in arbitrary direction-Brewster angles-Total internal reflection-poynting vector and power flow-Power loss in plane conductor.

UNIT-III	TRANSMISSION LINES	9 Hours
Equations o	f Voltage and Current on TX line- Propagation constant-char	acteristic impedance-
reflection ph	enomenon-standing waves-Input impedance of dissipation less the	ransmission line-open
and short c	ircuited line-power and impedance measurement on TX line	$-\lambda/8, \lambda/4 \& \lambda/2$ line $-\lambda/4$
impedance tr	ansformer- Smith chart and its applications-single and double stub	matching.
UNIT-IV	GUIDED WAVES AND WAVE GUIDES	9 Hours

Waves between parallel planes-TE waves-TM waves-Characteristic of TE and TM waves-TEM waves-Velocities of propagation-Attenuation in parallel plane Guides-Rectangular wave guide-TE and TM waves in rectangular waveguide-Impossibility of TEM wave in rectangular wave guide.

UNIT-VRADIATION9 HoursSolution for potential functions-Radiation from oscillating dipole -Power radiated by oscillating<br/>dipole- antenna parameters-Gain- directivity-Effective aperture-Radiation Resistance-Bandwidth-<br/>Beam width-Input impedance-Matching Baluns-Monopole and dipole antenna.9 Hours

#### Syllabus (2023-24)

#### B.E. (Electronics and Communication Engineering)

#### LIST OF EXPERIMENTS

#### **8086** Microprocessor Experiments

- 1. Basic Arithmetic and Logical operations using 8086.
- 2. Code conversion, decimal arithmetic and Matrix operations.
- 3. Floating-point operations, string manipulations, sorting and searching.
- 4. Counters and Time delay.
- 5. Password Checking, Print RAM size and System Date.

#### **8086** Microprocessor-Peripherals and Interfacing Experiments

- 6. Traffic Light Control and Stepper Motor Control.
- 7. Digital Clock.
- 8. Keyboard and Display.
- 9. Serial and Parallel Interface.
- 10. A/D and D/A Interface and Wave form Generation.

#### 8051 Microcontroller Experiments

- 11. Basic Arithmetic and Logical Operations.
- 12. Square program, Cube program and Finding 2's complement of a number.
- 13. Unpacked BCD to ASCII.

#### Total Hours 45 Hours

B.E. (Electronics and Communication Engineering)

### SEMESTER - V

Course Code	BECF185T10	L	Т	Р	С	IA	Ε	TM
							Α	
Course Name	MICROWAVE	3	0	0	3	40	60	100
	ENGINEERING							
Course Category	PROGRAMME CORE COURSE		Syllab	us Revi	sion		V	.1.0
Pre-requisite	Electromagnetic Fields and Wav (BECF183T60)	eguide	s (BE	CF184T	50), I	Netwo	ork 7	Theory

#### **Course Objectives:**

The course should enable the students

- 1. To inculcate the basics and representation of RF and microwave networks.
- 2. To instill knowledge on the properties of various microwave components.
- 3. To deal with the principles of microwave system design.
- 4. To deal with the microwave measurement techniques.
- 5. To introduce the application areas of microwave Systems.

#### **Course Outcomes:**

On completion of the course, the student will be able to

Course Outcomes	Description	Highest Bloom's Taxonomy
CO1	Illustrate concepts of propagation and analysis in RF and Microwave networks.	K2
CO2	Analyze performance of microwave system components and their properties.	K2
CO3	Analyze and synthesis the microwave systems.	К3
CO4	Apply the measurements of microwave systems.	K3
CO5	Design microwave systems for different practical application.	К3

#### **Correlation between Course Outcomes (COs) and Program Outcomes (POs):**

UNI	T-I	INTRODUCTION TO MICROWAVES	9 Hours
Med TEM micr wave volta	lical, EMI/ I A, TE and T owave trans eguide, Circ ages and cu	owaves, Microwave frequency bands; Applications of microwaves: CEMC. Mathematical model of microwave transmission-Concept of M modes, Losses associated with microwave transmission, Concept mission. Analysis of RF and microwave transmission lines- Coaxia ular waveguide, Strip line, Micro strip line, Microwave network ar rrents for non-TEM lines, Network parameters for microwave certies of S parameters.	mode, Features of t of impedance in l line, Rectangular nalysis- Equivalent
UNI	T-II	PASSIVE AND ACTIVE MICROWAVE DEVICES	9 Hours
Micr Dire Diod Micr	rowave pass ctional coup les, Transisto rowave semi	vive components: Terminations- Variable short circuit, Attenuated ler, Magic Tee, Power divider, Resonator. Microwave active compo prs, Oscillators, Mixers. conductor devices: Gunn diodes, IMPATT diodes, Schottky barrier d s: Klystron, TWT, Magnetron.	or, Phase shifters, ments and circuits:
TINIT	T-III	MICROWAVE DESIGN PRINCIPLES	9 Hours
amp desig	lifier design gn, Microw	sformation, Impedance matching, Microwave filter design, RF , Microwave power amplifier design, Low noise amplifier design, vave oscillator design. Microwave antennas- Antenna paramet stems, Antennas for airborne and satellite borne systems, Planar ant	Microwave mixer ers, Antenna for

Course Name	COMPUTER	3	0	0	3	40	60	100
	ARCHITECTURE							
<b>Course Category</b>	PROGRAMME CORE COURSE		Sylla	abus Rev	ision		V.	1.0
Pre-requisite	Digital System Design (BECF1 (BECF184T40)	83T40	), Mi	croproces	sors &	Mic	rocont	rollers

#### **Course Objectives:**

The course should enable the students -

- 1. To explain the concepts of structure of computers and instructions.
- 2. To familiarize with implementation of fixed point and floating-point arithmetic operations.
- 3. To study the design of data path unit and control unit for processor.
- 4. To understand the concept of various memories and I/O systems and interfacing.
- 5. To introduce the parallel processing technique and multi-core processors.

#### **Course Outcomes:**

On completion of the course, the student will be able to

Course Outcome	Description	Highest Bloom's
S		Taxonomy
CO1	Understand the basics structure of computers and instructions.	K2
CO2	Illustrate the fixed point and floating-point arithmetic for ALU operation.	K2
CO3	Discuss about implementation schemes of data-path and control units and pipeline performance.	К2
CO4	Explain the concept, interfacing and organization of various memories and I/O systems.	К3
CO5	Discuss parallel processing technique and unconventional architectures.	K2

#### **Correlation between Course Outcomes (COs) and Program Outcomes (POs):**

		1	1	1	1								1	1	
UNIT-I		STRUCTURE OF COMPUTERS AND INSTRUCTIONS											9 Hours		

Classification of computers and their characteristics –Functional units- Eight ideas — Performance, Instructions: Operations - Operands – Instruction representation – Logical operations – Decision

making operations - Procedures: Stacks, Ques and Subroutines - Program translation.

#### UNIT-II ARITHMETIC FOR COMPUTERS

Addition and Subtraction – Multiplication – Division – Floating Point arithmetic Operations – IEEE 754 floating point formats - Sub-word Parallelism.

#### UNIT-III PROCESSOR DATAPATH AND CONTROL UNITS

Fundamental concepts–Instruction execution –-Multiple bus organization – Data path–Hardwired control-Micro-programmed control, Pipelining – Pipelined data path and control, Data Hazards - Control Hazards – Exception handling.

#### UNIT-IV MEMORY AND I/O SYSTEMS

Memory Hierarchy – Review of memory technologies – Cache memory – Measuring and improving cache performance – Virtual memory - TLB's. Accessing I/O Devices – Interrupts – Direct Memory Access, Bus structure – Bus operation – Arbitration – Interface circuits - Standard I/O Interfaces – PCI, SCSI and USB.

#### UNIT-V PARALLELISM

Parallel processing challenges, Flynn's classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures, Hardware multithreading – Multi-core processors and other Shared Memory Multiprocessors - Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors. Introduction to Multiprocessor Network Topologies.

Pre-requisite	Signal & Systems (BECF183T50), Digital System Design (BECF183T40),										
	NETWORK THEORY (BECF183T60	)									

### **Course Objectives:**

The course should enable the students -

- 1. To learn discrete Fourier transforms, properties of DFT and its application to linear filtering.
- 2. To understand the characteristics of digital filters, design digital FIR filters and apply these filters to filter undesirable signals in various frequency bands.
- 3. To design digital IIR filters and apply these filters to filter undesirable signals in various frequency bands.
- 4. To understand the effects of finite precision representation on digital filters.
- 5. To understand the fundamental concepts of multi-rate signal processing and its applications.

#### **Course Outcomes:**

On completion of the course, the student will be able to

Course Outcomes	Description	Highest Bloom's Taxonom y
CO1	Apply DFT and FFT algorithms for the analysis of digital signals and systems.	K3
CO2	Design FIR filters for various applications.	K3
CO3	Design IIR filters for various applications.	K3
CO4	Characterize the effects of finite precision representation on digital filters.	K3
CO5	Design of multi-rate filters.	K3

UNIT-I OVERVIEW OF EDA AND PSPICE

9 Hours

Evolution of EDA tools, Typical design flow of VLSI IC circuits (ASIC Flow), Design capture and design verification tools. Analog Circuit Techniques: Overview of PSPICE; Types of simulation - DC, AC, Transient, Monte Carlo and Parametric. Simulation devices - Energy sources, Passive components, Semi-conductors, ICs, Special devices – Laplace devices, voltage markers, Initial conditions. Models for RLC, Diode, BJT, and MOSFET. Programming examples of Analog and Digital Circuit Models in the frequency domain and time domain.

#### UNIT-II INTRODUCTION TO VHDL

9 Hours

Introduction to VHDL – Entities and architectures, **Behavioral modelling** – Concurrent and sequential processing – if, case, loops, next, exit, wait, and assert statements.

Structural modelling – Port map, components, generics and Technology mapping.

Delay models –Inertial, transport and delta delays.

**Data types**- Variables, signals, constants, arrays, VHDL operators. Simple programming examples of combinational and sequential circuits.

### UNIT-III ADVANCED TOPICS IN VHDL AND SYNTHESIS

9 Hours

**Data flow Description:** Highlights of Data flow Description, Structure of Data flow Description, Data type-vectors, Common VHDL programming Errors.

Functions, Procedures, Packages, Libraries and Configurations.

**Introduction to VHDL Synthesis**: Register Transfer Level Description, Constraints, Technology Libraries, Conversion to Gate Level Netlists using Synthesis. Simple Synthesis Examples - Simple Gate—Concurrent Assignment, IF Control Flow Statements, Case Control Flow Statements.

#### UNIT-IV INTRODUCTION TO VERILOG HDL

9 Hours

Introduction to Verilog - Modules and module instances, design blocks and stimulus blocks; Data types and operators, System tasks and Compiler directives. Modeling – Gate level (Structural) modeling, Dataflow modeling- continuous assignments, Behavioral modeling- initial, always, blocking and non-blocking statements. Tasks and functions. Delay modeling- distributed, lumped, and pin-to-pin, rise / fall / turn-off, min / typical / max delays. Simple programming examples of combinational and sequential

circuits.

UNIT-V ADVANCED TOPICS IN VERILOG HDL AND SYNTHESIS

9 Hours

Switch level modeling – PMOS, NMOS and CMOS. Simple programming examples of switch level modeling- CMOS Inverter, CMOS Nand, CMOS Nor gates, CMOS Multiplexers and CMOS latches. Useful Modeling Techniques: Procedural continuous assignments, Overriding parameters, Conditional compilation and execution, Useful system tasks.

**Introduction to Verilog HDL Synthesis:** Logic Synthesis, Impact of logic synthesis, Verilog HDL Synthesis, Synthesis design flow, Verification of Gate-Level Netlist.

CO5       Demonstrate capability to work in a team and to build circuits for various supplications.         CO5       Demonstrate capability to work in a team and to build circuits for various supplications.
Course Objectives:         The course should enable the students         1. To understand the principle of Electric field and Magnetic field on various conductors.         2. To understand the working Principle of various type of Microwave Oscillators.         3. To know the behavior of microwave components and parameters.         4. To practice microwave measurement procedures.         5. To enable to students to work in a team and build applications.         Course Outcomes:         On completion of the course, the student will be able to         Course Outcomes:         Ot Learn about the characteristics and measurements of E and H Fields.         K2         CO3       Know about the behavior of microwave components.         K3         Coorse Course Out the characteristics and measurements of E and H Fields.         K2         CO1         Learn about the behavior of microwave components.         K3         CO2         Understand the working principle of microwave components.         K2         CO3       Know about the behavior of microwave components.         CO4       Analyze the S - parameter measurements of various Microwave K4         Components.       C05
The course should enable the students          1. To understand the principle of Electric field and Magnetic field on various conductors.         2. To understand the working Principle of various type of Microwave Oscillators.         3. To know the behavior of microwave components and parameters.         4. To practice microwave measurement procedures.         5. To enable to students to work in a team and build applications.         Course Outcomes:         On completion of the course, the student will be able to         Course Outcomes:         Outcome       Highest Bloom's Taxonomy         CO1       Learn about the characteristics and measurements of E and H Fields.       K2         CO2       Understand the working principle of microwave components.       K3         CO4       Analyze the S - parameter measurements of various Microwave K4       K4         Components.       CO5       Demonstrate capability to work in a team and to build circuits for various applications.       K4

LIST OF EXPERIMENTS
1. Determination of Electric Field Pattern between Two Circular Electrodes.
2. Determination of Electric Field between Parallel Conductors.
3. Measurement of Electric Field and Potential inside Parallel Plate Capacitor.
4. Measurement of Capacitance and Inductance of Transmission Lines.

#### B.E. (Electronics and Communication Engineering)

- 6. Determination of Magnetic Field of Coils.
- 7. Verification of Faraday's law of Magnetic Induction.
- $8. \ Determination of Velocity of electromagnetic waves for the given Co-axial Cable.$
- 9. Reflex klystron or Gunn diode characteristics and basic microwave parameter measurement such as VSWR, frequency, wavelength.
- 10. Directional Coupler Characteristics.
- 11. Radiation Pattern of Horn Antenna.
- 12. S-parameter Measurement of the following microwave components (Isolator, Circulator, E Plane Tee, H Plane Tee, Magic Tee).
- 13. Attenuation and Power Measurement.

#### **Syllabus (2023-24)**

B.E. (Electronics and Communication Engineering)

- 5. Amplifiers and Current mirrors using BJT/MOSFET
- 6. Op-Amp based Wein Bridge Oscillator and DAC using sub-circuit and Analog behavioral modeling
- 7. Digital Circuits-Logic Gates / Multiplexer/ Counter

#### HDL:(LogicDesignandSimulationofDigitalCircuitsusingVHDL/VerilogHDL/Both)

- 8. FullAdderandMultiplexerusingdifferentModelling/DescriptionsandConcurrentandSequential executioninVHDL.
- 9. 8-bit Adder/ Multiplier (min4-bit)-Port Map, Generics, Technology Mapping in VHDL
- 10. 8-bitCounter–Bottom-up approach design and Test vector generation in Verilog HDL
- 11. NAND/ NOR/ Transmission gates using Switch level modeling in Verilog HDL
- 12. FPGA real time programming and I/O Interfacing–Waveform generation / Traffic light controller
- 13. Design of Arithmetic Logic Unit.

	Total Hours 45 Hours
Text	Book(s)

UNIT-I	BASIC MEASUREMENTS CONCEPTS AND ERRORS	9 Hours
	s Systems –Units and standards of Measurements Systems - Static a	
	s – Accuracy, Precision, Reproducibility, Repeatability, Fidelity, Lag, Type	•
	g Instruments – Galvano Meter, D'Arsonaval Galvanometer, Moving Coil	
	nmeter, Voltmeter & Ohm Meter, Multimeter, Meter Protection, Extension	
	t, Moving Iron Instruments, Electrodynamometer.	
UNIT-II	DATA DISPLAY AND RECORDING SYSTEMS	9 Hours
Oscilloscope:	CRO - CRT, Deflection System, Delay Line, Specifications, Controls, O	CRO Probes,
Measurements	of time period and frequency, Lissajous Figures, Dual trace, Dual beam CF	ROs, Storage
Oscilloscope,	Digital Storage, Sampling Oscilloscope. Display Devises- LED, LCD, Dot M	Aatrix, Nixie,
EPID, IPS; Gr	aphic Recording Instruments: Strip Chart Recorders, X_Y Recorder, Plotte	rs.
UNIT-III	BRIDGES AND DIGITAL INSTRUMENTS	9 Hours
Bridges for RI	C measurements: Wheat Stone Bridge, Kelvin Bridge, Maxwell's Bridge, Ha	y Bridge and
Schering Brid	ge. Digital Voltmeter system: Types - Ramp-Type DVM, Dual-Slope Inter	grating Type
DVM, Succes	ssive-approximation DVM, Digital Multi meter, Vector voltmeter, Q m	eter, Digital
Frequency Me	ter System - Frequency measurements, Period and Ratio measurements and	time interval
measurements

Course Code	BECF186ED0	L	Т	Р	С	IA	EA	ТМ					
Course Name	VLSI DESIGN	3	0	0	3	40	60	100					
Course Category	PROGRAMME CORE	Syllabus Revision V.1											
	COURSE												
Pre-requisite Electronic Devices (BECF183T30), Analog Electronics (BECF184T20), Digita													
System Design (BECF183T40), Network Theory (BECF183T60)													
<b>Course Objectives:</b>													
The course should ena	ble the students												
1. To study the fu	indamentals of MOS transistor and	CMO	DS ci	cuits	and t	heir cl	naracteristics.						
2. To understand	the concepts of CMOS processing	techr	olog	y and	desig	n layo	outs.						
3. To discuss the technology.	e performance trade-offs involved	in de	esigni	ng ai	nd rea	alizing	the circuits	in CMOS					
4. To discuss arc	hitectural choices and design and re	ealiza	tion o	of sub	-syste	ems.							
5. To learn the different FPGA architectures and testability of VLSI circuits.													

#### **Course Outcomes:**

On completion of the course, the student will be able to

Course	Description	Highest
Outcomes		Bloom's
		Taxonomy
CO1	Understand MOS transistor theory and design Inverters.	K2
CO2	Realize the concepts of CMOS circuits using processing technology and	K2
	layouts.	
CO3	Design and realize the circuits in CMOS logic circuits.	K3
CO4	Design arithmetic building blocks and memory subsystems.	K3
CO5	Apply and implement FPGA design flow and testing.	K3

Correlation between Course Outcomes (COs) and Program Outcomes (POs):

				Program Specific Outcomes (PSOs)

UNIT-I	INTRODUCTION TO VLSI AND MOS TRANSISTOR 9 Hours											
	THEORY											
Evolution of IC	Technologies: SS1, MSI, LSI, VLSI, ULSI, and GLSI. The Moore's	Law, MOS										
THEORY: The	MOS as switch - nMOS and pMOS. CMOS logic and its features,	The nMOS										
Enhancement Tra	nsistor - Working and Characteristics. Threshold voltage and Body effe	ect of MOS.										
MOS device des	ign equations (First order effects).MOS INVERTERS: The CM	IOS inverter										
Transfer character	ristics, Noise margin. The nMOS and pseudo-nMOS inverter, Tile BiCM	IOS Inverter,										
Tile CMOS Trans	mission gate.											

UNIT-IICMOS PROCESSING TECHNOLOGY AND LAYOUTS9 HoursSilicon Semiconductor fabrication technology, Fabrication forms and CMOS (Basic n-WELL process)LAYOUTS AND DESIGN RULES: Layout based rules, Simple CMOS Stick Layout diagrams -Inverter, NAND, NOR gates and Multiplexer. Scaling: Constant Field, and Constant voltage.

# UNIT-III MOS CIRCUIT PERFORMANCE AND CMOS LOGIC 9 Hours CIRCUITS 9 Hours

Sheet Resistance definition, MOS device capacitances – model, Distributed RC effects, switching characteristics - Rise time, fall time and Delay time. Stage ratio, Simple examples of Combinational and Sequential circuits using CMOS: NANDI NOR gates, and Compound gates, Latches, and Registers.

#### UNIT-IV SUB SYSTEM DESIGN AND TESTING

General System Design-Design of ALU subsystems, Adder and Multipliers Memories - Static RAM, Control Logic Implementation using PLA's. Testing of VLSI circuits - Need for Testing, Fault models, and ATPG. Design for Testability (DFT) - Scan Based and Self-test approaches.

#### UNIT-V PROGRAMMABLE LOGICS

Basic ROM structures, PLAs, PALs, PLDs, Implementation of Traffic Light controller using PLD, FPGAs and CPLDs: XILINX and ALTERA series.

Total Hours 45 Hours

#### UNIT-I INTRODUCTION TO EMBEDDED COMPUTING AND ARM PROCESSORS

9 Hours

Complex systems and microprocessors– Embedded system design process – Overview on formalisms for system design –Design example: Model train controller– Instruction sets preliminaries – ARM Processor – CPU: programming input and output– supervisor mode, exceptions and traps – Co– processors– Memory system mechanisms – CPU performance– CPU

power consumption- Introduction to Embedded Industrial CPUs for rugged environment.

UNIT-IIEMBEDDED COMPUTING PLATFORM DESIGN9 HoursThe CPU Bus-Memory devices and systems-Designing with computing platforms – consumer<br/>electronics architecture – platform-level performance analysis – Components for embedded<br/>programs- Models of programs- Assembly, linking and loading – compilation Programming<br/>techniques- Program level performance analysis – Software performance optimization –Program<br/>validation and testing.

UNIT-III PROCESSES AND OPERATING SYSTEMS	
------------------------------------------	--

Introduction – Kernel, Threads –Multiple tasks and multiple processes – Multirate systems– Preemptive real–time operating systems– Priority based scheduling– Interposes communication mechanisms – Evaluating operating system performance– power optimization strategies for processes - GPOS versus RTOS- Classification of RTOS- Example Real time operating systems– POSIX– Windows CE.

UNIT-IV	SYSTEM DESIGN TECHNIQUES AND NETWORKS	9 Hours
		/

Design methodologies– Design flows – Requirement Analysis – Specifications–System analysis and architecture design – Quality Assurance techniques– Distributed embedded systems – Multiprocessors–CPUs, accelerators, MPSoCs– Overview on Internet of (robotic) Things– Ubiquitous optimization.

#### UNIT-V CASE STUDY

Data compressor – Alarm Clock – Audio player – Software modem–Digital still camera – Telephone answering machine–Engine control unit – Video accelerator–Challenges and trends in embedded systems in industrial applications.

2. Synthesis, Placement and Routing (P&R) and post P&R simulation of the components simulated in Expt. No. 1 above

3. Critical paths and static timing analysis results to be identified. Identify and verify possible conditions under which the blocks will fail to work correctly.

4. Hardware fusing and testing of each of the blocks simulated in Expt. 1above (Using either chip scope feature (Xilinx) or equivalent tools).

5. Invoke the PLL and demonstrate the use of the PLL module for clock generation in FPGAs.

### **IC Design Experiments:**

6. Design and PSPICE simulation of

(a) Simple 5 transistor differential amplifier. Measure gain, BW, output impedance, ICMR, and CMRR.

(b) Ring Oscillator

7. Layout generation, DRC and LVS Checking, Parasitic Extraction and Re-simulation of CMOS Inverter.

8. Synthesis and Standard cell-based design of a circuit simulated in Expt. 6-b above -

Synthesis principles, Logical Effort, Interpreting Scripts, Constraints and Library preparation and generation, Boolean Optimization, Optimization for Area, Power.

9. For Expt. 6-b above, Floor Planning, Placement and Routing (P&R), Power and Clock Routing, and post P&R simulation

10. Static Timing analyses procedures and constraints. Critical path considerations.

11. DFT - Scan chain insertion / Clock Tree Synthesis / Stick diagrams.

UNIT-I	n of F	INTRODUCTION TO OPTICAL FIBERS										interne	9 Hours					
Acceptar Mode th		-		-			•	• •	-					-				

Mode theory of Circular Wave guides- Overview of Modes-Key Modal concepts- Linearly Polarized

Modes -Single Mode Fibers-Graded Index fiber structure.

### UNIT-II SIGNAL DEGRADATION OPTICAL FIBERS 9 Hours

Attenuation - Absorption losses, Scattering losses, Bending Losses, Core and Cladding losses, Signal Distortion in Optical Waveguides-Information Capacity determination - Group Delay- Material Dispersion, Wave guide Dispersion, Signal distortion in SM fibers - Polarization Mode dispersion, Intermodal dispersion, Pulse Broadening in GI fibers - Mode Coupling -Design Optimization of SM fibers - RI profile and cut-off wavelength.

UNIT-III FIBER OPTICAL SOURCES AND COUPLING

Direct and indirect Band gap Materials -LED structures -Light source materials -Quantum efficiency and LED power, Modulation of a LED, lasers Diodes-Modes and Threshold condition – Rate equations-External Quantum efficiency -Resonant frequencies -Laser Diodes, Temperature effects, Introduction to Quantum laser, Fiber amplifiers- Power Launching and coupling, Lencing schemes, Fiber -to- Fiber joints, Fiber splicing-Signal to Noise ratio, Detector response time.

#### UNIT-IV FIBER OPTIC RECEIVER AND MEASUREMENTS

Fundamental receiver operation, Pre-amplifiers, Error sources – Receiver Configuration– Probability of Error –Quantum limit, Fiber Attenuation measurements- Dispersion measurements – Fiber Refractive index profile measurements – Fiber cut- off Wave length Measurements – Fiber Numerical Aperture Measurements – Fiber diameter measurements.

#### UNIT-V OPTICAL NETWORKS AND SYSTEM TRANSMISSION

Basic Networks – SONET / SDH – Broadcast – and – select WDM Networks –Wavelength Routed Networks – Non linear effects on Network performance – Link Power budget - Rise time budget- Noise Effects on System Performance-Operational Principles of WDM Performance of WDM + EDFA system – Solutions – Optical CDMA – Solitons in Optical Fiber -Ultra High Capacity Networks.

Course Code		L	Т	Р	С	IA	EA	TM
Course Name	CYBER SECURITY	3	0	0	1	40	60	100
Course Category	MANDATORY COURSE (MC)*	Syllabus Revision V.1.0						V.1.0
Pre-requisite	Nil							
Course Objectives	•							

#### Course Objectives:

- 1. To learn the foundations of Cyber security & threat landscape and to equip students with technical knowledge and skills needed to protect and defend against cyber threats.
- 2. To develop skills that can help plan, implement and monitor cyber security mechanisms for protection of information technology assets.
- 3. To expose students to governance, regulatory, legal, economic, environmental, social & ethical contexts of cyber security and use of online social media networks.
- 4. To systematically educate the necessity for understanding impact of cyber crimes and threats with solutions in a global and societal context.
- 5. To select suitable ethical principles & commit to professional responsibilities and human values and contribute value/wealth for the benefit of the society.

#### **Course Outcomes:**

On completion of the course, students will be able to -

Course Outcome s	Description	Highest Bloom's Taxonomy
CO1	To understand the concept of Cyber security, Issues and challenges associated with it.	K3
CO2	To understand cyber crimes, their nature, legal remedies and report about crimes through available platforms and procedures.	K3
CO3	To appreciate various privacy and security concerns on online Social media and understand reporting procedure of inappropriate content, legal aspects and best practices for the use of Social media platforms.	К3
CO4	To understand the basic concepts related to E-Commerce and digital payments.	K3
CO5	To understand the basic security aspects related to Computer and Mobiles.	K3

#### UNIT-I

#### **INTRODUCTION TO CYBER SECURITY**

9 Hours

9 Hours

Defining Cyberspace and Overview of Computer and Web-technology, Architecture of cyberspace, Communication and web technology, Internet, World wide web, Advent of internet, Internet infrastructure for data transfer and governance, Internet society, Regulation of cyberspace, Concept of cyber security, Issues and challenges of cyber security.

### UNIT-II CYBER CRIME AND CYBER LAW

Classification of cyber crimes, Common cyber crimes- cyber crime targeting computers and mobiles, cyber crime against women and children, financial frauds, social engineering attacks, malware and ransom ware attacks, zero day and zero click attacks, Cybercriminals modus-operandi , Reporting of cyber crimes, Remedial and mitigation measures, Legal perspective of cyber crime, IT Act 2000 and its amendments, Cyber crime and offences, Organisations dealing with Cyber crime and Cyber security in India, Case studies.

#### UNIT-III SOCIAL MEDIA OVERVIEW AND SECURITY

9 Hours

Introduction to Social networks. Types of Social media, Social media platforms, Social media monitoring, Hashtag, Viral content, Social media marketing, Social media privacy, Challenges, opportunities and pitfalls in online social network, Security issues related to social media, Flagging and reporting of inappropriate content, Laws regarding posting of inappropriate content, Best practices for the use of Social media, Case studies.

# UNIT-IVE-COMMERCE AND DIGITAL PAYMENTS9 Hours

Definition of E- Commerce, Main components of E-Commerce, Elements of E-Commerce security, E-Commerce threats, E-Commerce security best practices, Introduction to digital payments, Components of digital payment and stake holders, Modes of digital payments- Banking Cards, Unified Payment Interface (UPI), e-Wallets, Unstructured Supplementary Service Data (USSD), Aadhar enabled payments, Digital payments related common frauds and preventive measures. RBI guidelines on digital payments and customer protection in unauthorised banking transactions. Relevant provisions of Payment Settlement Act, 2007.

# UNIT-VDIGITAL DEVICES SECURITY , TOOLS AND TECHNOLOGIES9 HoursFOR CYBER SECURITY9 Hours

End Point device and Mobile phone security, Password policy, Security patch management, Data backup, Downloading and management of third party software, Device security policy, Cyber Security best practices, Significance of host firewall and Ant-virus, Management of host firewall and Anti-virus, Wi-Fi security, Configuration of basic security policy and permissions.

Definition of Management, process of Management, Planning, Organizing, leading, Controlling Classical Approach-Contribution and Limitation, Management Science Approach, Skills, Roles and Performance: Types of managers Managerial Skills,- Technical Skill, Analytical Skill Decision Making skill, Human Relation skill, Communication skill. Managerial Roles – Interpersonal Role, Informational Role, Decisional Role.

UNIT-II **PLANNING FUNCTION 10 Hours** Elements of Planning-Objectives, Action, Resource, Implementation, Managerial Decision Making: Types of Decision, Process of Decision Making, Decision Making-Certainty Condition, Uncertainty Condition, Selecting Alternative. Managing Information System; Need for Decision Support System, MIS and DSS Strategic Planning –Organizational Strategy, Business Portfolio Matrix.

UNIT-III **ORGANIZING FUNCTION** Organizational Structure- Job Design, Departmentation, Span of Control, Delegation of Authority, Decentralized authority, Chain of Command and Authority, Line and Staff concept Matrix organizational Design.

#### UNIT-IV **ENGINEERING ETHICS** 9 Hours Senses of 'engineering ethics' – variety of moral issues – types of inquiry – moral dilemmas – moral autonomy - kohlberg's theory - Gilligan's theory - consensus and controversy - professions and professionalism - professional ideas and virtues - theories about right action - self-interest - customs and religion – uses of ethical theories.

#### **ENGINEER'S RESPONSIBILITY FOR SAFETY UNIT-V** 8Hours Safety and risk - Assessment of safety and risk - Risk benefit analysis - Reducing risk - The Three Mile Island and Chernobyl- case studies.

**Total Hours** 45 Hours

Text Book(s)

- Mike Martin & Roland schinzinger "Ethics in engineering" McGraw Hill, 2009. 1.
- Govindarajan M, Natarajan. S.Senthilkumar V.S, "Engineering Ethics", PHI, 2004. 2.
- 3 Dr. T. Ramaswamy, Principles of Management, Himalaya Publishing House, 2014.

to fulfill the above human aspirations: understanding and living in harmony at various levels. **UNDERSTANDING HARMONY IN HUMAN BEING - HARMONY** UNIT-II 9 Hours **IN MYSELF** Understanding human being as a co-existence of the sentient 'I' and the material 'Body'. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility. Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer). Understanding the characteristics and activities of 'I' and harmony in 'I'. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail. Programs to ensure Sanyam and Health. UNIT-III UNDERSTANDING HARMONY IN FAMILY AND SOCIETY-9 Hours HARMONY IN HUMAN- HUMAN RELATIONSHIP Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfillment to ensure mutual happiness; Trust and Respect as the foundational values of relationship. Understanding the meaning of Trust; Difference between intention and competence. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship. Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family UNIT-IV UNDERSTANDING HARMONY IN NATURE AND EXISTENCE -9 Hours WHOLE EXISTENCE AS COEXISTENCE Understanding the harmony in the Nature. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self regulation in nature. Understanding Existence as Co-existence of mutually interacting units in all- pervasive space. Holistic perception of harmony at all levels of existence. UNIT-V IMPLICATIONS OF ABOVE HOLISTIC UNDERSTANDING OF 9 Hours HARMONY ON PROFESSIONAL ETHICS Natural acceptance of human values. Definitiveness of Ethical Human Conduct. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competence in professional ethics: a. Ability to utilize professional competence for augmenting universal human order b. Ability to identify scope and characteristics of people friendly and eco-friendly production systems, c. Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems. Strategy for transition from present state to Universal Human Order: a. At the level of individual: as socially and ecologically responsible engineers, technologists and managers b. At the level of society: as mutually enriching institutions and organizations. Sum up. Total Hours | 45 Hours Text Book(s) Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New 1 Delhi, 2010. **Reference Book(s)**

arrays, Adaptive array, Basic principle of antenna Synthesis-Binomial array, Yagi Arrays.

#### UNIT-III APERTURE AND SLOT ANTENNAS

Radiation from rectangular apertures, Uniform and Tapered aperture, Horn antenna, Reflector antenna, Aperture blockage, Feeding structures, Slot antennas, Micro strip antennas – Radiation mechanism – Application, Numerical tool for antenna analysis.

#### UNIT-IV SPECIAL ANTENNAS

Principle of frequency, independent antennas –Spiral antenna, helical antenna, Log periodic, Modern antennas- Reconfigurable antenna, Active antenna, Dielectric antennas, Electronic band gap structure and applications, Antenna Measurements-Test Ranges, Measurement of Gain, Radiation pattern, Polarization, VSWR.

#### UNIT-V PROPAGATION OF RADIO WAVES

Modes of propagation , Structure of atmosphere , Ground wave propagation, Tropospheric propagation , Duct propagation, Troposcatter propagation , Flat earth and Curved earth concept Sky wave propagation – Virtual height, critical frequency , Maximum usable frequency – Skip distance, Fading , Multi hop propagation.

Course Name	INFORMATION THEORY	3	0	0	3	40	60	100
	AND CODING							
Course Category	PROFESSIONAL ELECTIVE COURSE -I		Sylla	abus R	evision			V.1.0
Pre-requisite		1.D.		r	• ,•			

#### Basic Knowledge of Analog and Digital Communication

#### **Course Objectives:**

The course should enable the students:

- 1. To provide an insight into the concept of information in the context of communication theory and its significance in the design of communication receivers.
- 2. To explore in detail, the calculations of channel capacity to support error-free transmission and also, the most commonly used source coding and channel coding algorithms.
- 3. To encourage and train to design coding schemes for data compression and error correction,
- 4. They will also get an overall perspective of how this impacts the design of an optimum communication receiver.

#### **Course Outcomes:**

On completion of the course, the student will be able to:

Course	Description	Highest
Outcomes		Bloom's
		Taxonomy
CO1	Overview of Probability Theory, significance of "Information" wi	th <b>K2</b>
	respect to Information Theory.	
CO2	Derive equations for entropy, mutual information and channel capaci	ty <b>K3</b>
	for all kinds of channels.	
CO3	Implement the various types of source coding algorithms and analy-	ze K4
	their performance.	
CO4	Explain various methods of generating and detecting different types	of K3
	error correcting codes.	
CO5	Understand the fundamentals of Field Theory and polynomi	al K2
	arithmetic.	
CO6	Design linear block codes and cyclic codes (encoding and decoding).	K3
Correlation	between Course Outcomes (COs) and Program Outcomes (POs):	
	Program Autcomes (PAs)	Program Specific

#### UNIT-I SOURCE CODING AND ENTROPY

9 Hours

9 Hours

9 Hours

**10 Hours** 

Definition and Examples- Uniquely Decodable Codes-Instantaneous Codes-Constructing Instantaneous Codes- Kraft's Inequality - McMillan Inequality- Information and Entropyproperties of the Entropy function - Entropy and Average Word-Length- Shannon-Fano coding-Entropy of Extensions and products-Shannon's First Theorem.

#### UNIT-II

**INFORMATION CHANNEL** 

Information Channel- Definitions- Binary Symmetric channel-System Entropies-system entropies for the Binary Symmetric Channel-Extension to Shannon's First Theorem to information channels-Mutual Information-Mutual information for the Binary Symmetric channel-Channel Capacity.

#### UNIT-III CHANNELS AND OPTIMAL CODES

Decision rules- Improved Reliability- hamming Distance- Statement and proof of Shannon's Theorem- Converse of Shannon's Theorem- Optimality-Binary Huffman Codes-Average Word-length of Huffman codes-Optimally of Binary Huffman codes-r-ary Huffman codes-Extensions of source.

#### UNIT-IV CYCLIC CODES

Description of cyclic codes- Generator and parity check matrices of Cyclic codes- Encoding of cyclic codes- Cyclic hamming codes- Syndrome Computation and error Detection- Decoding of cyclic codes- Cyclic Hamming Codes- Error- Trapping Decoding- Improved error-Trapping Decoding- The (23,12) Golay code- shortened Cyclic codes-Cyclic Product codes- Quasi-Cyclic codes.

UNI	Г-V	CONVOLUTIONAL ARITHMETIC CODES	8 Hours
Enco	ding of	Convolutional codes - Structural properties of Convolutional co	odes- Distance
	-	convolutional codes.

UNIT-I **MULTIMEDIA COMPONENTS** 

Introduction - Multimedia skills - Multimedia components and their characteristics - Text, sound, images, graphics, animation, video, hardware.

#### UNIT-II AUDIO AND VIDEO COMPRESSION

Audio compression-DPCM-Adaptive PCM -adaptive predictive coding-linear Predictive codingcode excited LPC-perpetual coding Video compression-principles-H.261-H.263-MPEG 1, 2, and 4.

#### UNIT-III TEXT AND IMAGE COMPRESSION

Compression principles-source encoders and destination encoders-lossless and lossy compression- entropy encoding-source encoding-text compression-static Huffman coding dynamic coding-arithmetic coding- Lempel ziv-welsh Compression-image compression.

UNIT-IV **VOIP TECHNOLOGY** 

Basics of IP transport, VoIP challenges, H.323/ SIP -Network Architecture, Protocols, Call establishment and release, VoIP and SS7, Quality of Service- CODEC Methods- VOIP applicability.

#### **MULTIMEDIA NETWORKING** UNIT-V

Multimedia networking -Applications-streamed stored and audio-making the best Effort serviceprotocols for real time interactive Applications-distributing multimedia-beyond best effort servicesecluding and policing Mechanisms-integrated services-differentiated Services-RSVP.

# UNIT-I RF ISSUES

9 Hours

Importance of RF design, Electromagnetic Spectrum, RF behavior of passive components, Chip components and Circuit Board considerations, Scattering Parameters, Smith Chart and applications.

UNIT-II RF FILTER DESIGN
--------------------------

9 Hours

Overview, Basic resonator and filter configuration, Special filter realizations, Filter implementations, Coupled filter.

#### UNIT-III ACTIVE RF COMPONENTS & APPLICATIONS

9 Hours

RF diodes, BJT, RF FETs, High electron mobility transistors; Matching and Biasing Networks – Impedance matching using discrete components, Micro-strip line matching networks, Amplifier classes of operation and biasing networks.

#### UNIT-IV RF AMPLIFIER DESIGNS

Characteristics, Amplifier power relations, Stability considerations, Constant gain circles, Constant VSWR circles, Low Noise circuits, Broadband, high power and multistage amplifiers.

#### UNIT-V OSCILLATORS, MIXERS & APPLICATIONS

9 Hours

9 Hours

Basic Oscillator model, High frequency oscillator configuration, Basic characteristics of Mixers; Phase Locked Loops; RF directional couplers and hybrid couplers; Detector and demodulator circuits.

Total Hours 45 Hours

Text	z Book(s)
1.	Reinhold Ludwig and Powel Bretchko, RF Circuit Design – Theory and Applications, Pearson Education Asia, First Edition, 2001.
2.	Pozar, Microwave Engineering, John Wiley, Third Edition, 2004.
Ref	ference Book(s)
1.	Joseph. J. Carr, Secrets of RF Circuit Design, McGrawHill, Third Edition, 2000.

Course Code	BECF187EG0	L	Т	Р	С	IA	EA	TM
Course Name	DIGITAL IMAGE & VIDEO	3	0	0	3	40	60	100
	PROCESSING							
Course	PROFESSIONAL ELECTIVE		Sylla	abus R	evision			V.1.0
Category	COURSE -III							
Pre-requisite	Basic knowledge of Signals &	Syster	ns, Di	igital S	ignal P	rocessi	ng an	dDigital
	System Design							
<b>Course Objectiv</b>	ves:							
The course shoul	ld enable the students							
1. To study	the concepts of complexity of algo	orithm	s and	underst	and the	analys	is of	algorithms

- 1. To study the concepts of complexity of algorithms and understand the analysis of algorithms based on input size.
- 2. To learn advanced data structure and their fundamentals for application development.
- 3. To learn use of greedy and dynamic programming techniques and their application in the field of computer science to solve problems.
- 4. To learn algorithms for graph theory problem like spanning tree problem, single source shortest path and advance features of graph application in field of computer science.
- 5. To learn string matching algorithms and, P, NP problem in computer science domain.

Course Outcomes	Description	Highest Bloom's
outcomes		Taxonomy
CO1	Understand theory and models in Image and Video Processing.	K2
CO2	Explain the need of spatial and frequency domain techniques for image compression.	K3
CO3	Comprehend different methods, models for video processing and motion estimation.	К3
CO4	Illustrate quantitative models of image and video segmentation.	K4
CO5	Apply the process of image enhancement for optimal use of resources.	K3
CO6	Compose various Morphological operations on binary images and Generate their transformed images.	K3

UNIT-I Introduct		TROE											9 Ho			

MEMS, Overview of Micro fabrication, Microelectronics Fabrication Process flow, Process selection and Design.

UNIT-II SENSORS AND ACTUATORS

9 Hours Introduction to electrostatic sensors and actuators – parallel plate capacitors and applications – Inertia sensor, pressure sensor, flow sensor, tactile sensor, parallel-plate actuators, Thermal Sensors and actuators. Piezo resistive sensors - piezo resistive sensor materials, stress analysis of mechanical elements and applications. Piezoelectric sensing and actuators - Quartz, PZT, PVDF,

ZnO.

UNIT-III LITHOGRAPHY (LIGA) AND ETCHING TECHNIQUE

Lithography's origin, Overview of photolithography, Lithography sensitivity and intrinsic resist sensitivity, resolution in photolithography and its enhancement technique, Dry Etching: Definitions and Jargon, Physical etching, plasma etching, Deep reactive Ion etching, Comparing Wet and Dry etching.

UNIT-IV SURFACE MICROMACHINING

Introduction, Mechanical properties of Thin films, Surface Micromachining processes, Poly-Si surface Micromachining modifications, comparison of bulk micromachining and surface micromachining. Top-Down and Bottom-Up micromachining technique.

UNIT-V APPLICATIONS AND CASE-STUDIES

MEMS in Automotive market, MEMS in Medical and Biomedical Market, Environmental Monitoring, Industrial/Automation, IT/Peripheral, Telecommunication. CASE-STUDIES: Blood Pressure (BP) Sensor, Microphone, Acceleration sensor, Gyros.

> **Total Hours** 45 Hours

Text	z Book(s)
1.	"Foundation of MEMS" Chang Liu, Second Edition, Parson, 2012.
2.	"Fundamentals of Micro fabrication - The Science of Miniaturization" Marc J.Madou,
	Second Edition, CRC Press, 2011.

UNIT-	NIT-IINTRODUCTION TO SPEECH PRODUCTION AND9 Hours																					

MODELING

Human Auditory System; General structure of speech coders; Classification of speech coding techniques – parametric, waveform and hybrid; Requirements of speech codecs –quality, coding delays, robustness. Speech Signal Processing- Pitch-period estimation, all-pole and all-zero filters, convolution; Power spectral density, periodogram, autoregressive model, autocorrelation estimation.

UNIT-II LINEAR PREDICTION OF SPEECH

Basic concepts of linear prediction; Linear Prediction Analysis of non-stationary signals – prediction gain, examples; Levinson-Durbin algorithm; Long term and short-term linear prediction models; Moving average prediction.

UNIT-III SPEECH QUANTIZATION

Scalar quantization–uniform quantizer, optimum quantizer, logarithmic quantizer, adaptive quantizer, differential quantizers; Vector quantization – distortion measures, codebook design, codebook types.

UNIT-IV SCALAR QUANTIZATION OF LPC

Spectral distortion measures, Quantization based on reflection coefficient and log area ratio, bit allocation; Line spectral frequency – LPC to LSF conversions, quantization based on LSF Linear Prediction Coding- LPC model of speech production; Structures of LPC encoders and decoders; Voicing detection; Limitations of the LPC model.

UNIT-V CODE EXCITED LINEAR PREDICTION

CELP speech production model; Analysis-by-synthesis; Generic CELP encoders and decoders; Excitation codebook search – state-save method, zero-input zero-state method; CELP based on adaptive codebook, Adaptive Codebook search; Low Delay CELP and algebraic CELP. Speech Coding Standards-An overview of ITU-T G.726, G.728 and G.729 standards.

Course Code	BECF187EN0	L	Т	Р	С	IA	EA	TM	
Course Name	HIGH SPEED	3	0	0	3	40	60	100	
	ELECTRONICS								
Course	PROFESSIONAL ELECTIVE		Sylla	abus R	evision		1	V.1.0	
Category	COURSE -IV								
Pre-requisite	Basic Knowledge in Electronic Circuits and Transmission Lines								

Course Objectives:

The course should enable the students -

- 1. To understand significance and the areas of application of high-speed electronics circuits.
- 2. To understand the importance of high-speed electronics circuits in various applications.
- 3. To learn the characteristics of various components used in high speed electronics.
- 4. To implement the design of High-speed electronic system using those components.
- 5. To understand the significance of noise analysis.

Course Outcomes:

On completion of the course, the student will be able to

Course Outcom	Description	Highest Bloom's
es		Taxonomy
CO1	Understand significance and the areas of application of high-speed electronics circuits.	K2
CO2	Understand the properties of various components used in high speed electronics.	K2
CO3	Design High-speed electronic system using appropriate components.	K6
CO4	Understand about CAD tools for PCB Design.	K2
CO5	Understand about noise analysis.	K2

UNIT-	UNIT-I TRANSMISSION LINE THEORY CROSSTALK AND								9 Hours		urs							
	NONIDEAL EFFECTS																	

Signal integrity: impact of packages, vias, traces, connectors; non-ideal return current paths, high frequency power delivery, methodologies for design of high speed buses; radiated emissions and minimizing system noise.

UNIT-II DEVICES

Passive and active, Lumped passive devices (models), Active (models, low vs. high frequency).

UNIT-III **RF AMPLIFIER**

Design, Stability, Low Noise Amplifiers, Broadband Amplifiers (and Distributed) Power Amplifiers, Class A, B, AB and C, D E Integrated circuit realizations, Cross-over distortion Efficiency RF power output stages Mixers –Up conversion Down conversion, Conversion gain and spurious response. Oscillators.

UNIT-IV PRINCIPLES

PLL Transceiver architectures Printed Circuit Board Anatomy, CAD tools for PCB design, Standard fabrication, Microvia Boards. Board Assembly: Surface Mount Technology, Through Hole Technology, Process Control and Design challenges.

UNIT-V NOISE ANALYSIS

Sources, Noise Figure, Gain compression, Harmonic distortion, Inter-modulation, Cross-modulation, Dynamic range.

	PROCESSING											
Course	PROFESSIONAL ELECTIVE		Sylla	abus R	evision		7	V.1.0				
Category	COURSE -V											
Pre-requisite	Basic Knowledge in Signals & Systems and Digital Signal Processing											

Course Objectives:

The course should enable the students

- 1. To introduce the adaptive filter for estimation and tracking.
- 2. To develop various adaptive algorithms for communication systems.
- 3. To apply the adaptive theory to a variety of practical problems.
- 4. This course demonstrates the design of important class of adaptive filters, LMS, RLS and Kalman filters.

Course Outcomes:

On completion of the course, the student will be able to

Course Outcom	Description	Highest Bloom's
es		Taxonomy
CO1	Able to analyze the filtering tasks and identify the need for adaptation in filtering.	К3
CO2	Able to design filter to meet performance requirements derived from various real life applications.	K2
CO3	Able to develop algorithms for the design of filters to track variations of non-stationary random process.	К3
CO4	Able to evaluate the performance of the developed filter in terms of computational complexity convergence time and stability.	K4
CO5	Implement LMS algorithm for signal processing applications.	K3
CO6	Design kalman filter for adaptive noise cancellation.	K2

UNIT-I	CONCEPTS OF PRODUCT DEVELOPMENT	9 Hours
Need for PD	- Generic product Development Process Phases- Product Development Pro-	ocess Flows-
Product Dev	elopment organization structures Strategic importance of Product Plannin	g process –
Product Spec	ifications Target Specifications-Plan and establish product specifications - in	ntegration of
customer, des	signer, material supplier and process planner, Competitor and customer – Un	nderstanding
customer an	d behaviour analysis. Concept Generation, Five Step Method-Basics	of Concept
selection- Cr	eative thinking -creativity and problem solving- creative thinking methods	- generating
design cond	epts-systematic methods for designing -functional decomposition	– physical
decompositio	n.	

UNIT-II INTRODUCTION TO APPROACHES IN PRODUCT DEVELOPMENT

Product development management - establishing the architecture - creation - Product Architecture changes - variety – component standardization , clustering -geometric layout development - Fundamental and incidental interactions - related system level design issues - secondary systems - architecture of the chunks - creating detailed interface specifications-Portfolio Architecture competitive benchmarking- Approach for the benchmarking process-Design for manufacturing - Industrial Design-Robust Design – Prototype basics - Principles of prototyping - Planning for prototypes Economic & Cost Analysis -Testing Methodologies- Product Branding.

UNIT-III INDUSTRIAL DESIGN STRATEGIES

Role of Integrating CAE, CAD, CAM tools for Simulating product performance and manufacturing processes electronically- Basics on reverse engineering – Reverse engineering strategies – Finding reusable software components. Recycling real-time embedded software based approach and its logical basics Incorporating reverse engineering for consumer product development –case study on DeskJet Printer.

UNIT-IV ELECTRONIC PRODUCT DEVELOPMENT STAGES

Product Development Stages-Embedded product modeling- Linear, Iterative, Prototyping, Spiral - Selection of Sensor, Voltage Supply, Power supply protection, Grounding and noise elimination methods, Thermal protection with heat management – PCB design steps – Software design and testing method – documentation.

UNIT-V EMBEDDED PRODUCTSDESIGN

Creating general Embedded System Architecture (with Case study example: Mobile Phone / DeskJet Printer./ Robonoid as a product) –Architectural Structures- Criteria in selection of Hardware Software Components, processors, input/output interfaces & connectors, ADC System ,Memory, choosing Bus Communication Standards, Criteria in selection of Embedded OS/Device Drivers, Need for Developing with IDE, Translation & Debugging Tools & ApplicationSoftware, Performance Testing, Costing, Benchmarking, Documentation.

Course Code	BECF188ES0	L	Т	Р	С	IA	EA	TM
Course Name	NEURAL NETWORKS &	3	0	0	3	40	60	100
	FUZZY LOGIC							
Course	PROFESSIONAL ELECTIVE		Sylla	abus R	evision			V.1.0
Category	COURSE -VI							
Pre-requisite	Basic knowledge of Mathemati	ics, L	linear	algebra	ı, advaı	nced ca	alculu	s, discrete
	mathematics, Boolean algebra or e	quiva	lent.					

Course Objectives:

The course should enable the students

- 1. To learn the basics of Neural Networks and essentials of Artificial Neural Networks with ADALINE and MADALINE Networks.
- 2. The main objective of this course is to provide the student with the basic understanding of neural networks and Fuzzy logic fundamentals.
- 3. It deals with Associate Memories and CPN.
- 4. To learn the various architectures of building an ANN and its applications.
- 5. To learn the fundamentals of Crisp sets, Fuzzy sets and Fuzzy Relations.

Course Outcomes:

On completion of the course, the student will be able to

On con	ipietic	mort	ne cot	115e, u		lent wi

UNIT-II

SPECTRUM AND RF CHARACTERISTICS

9 Hours

9 Hours

9 Hours

8 Hours

Carrier aggregation: LTE and LTE-Advanced carrier aggregation scenario; Control channels; Multiple access scheme; Transceiver architecture; Spectrum sharing; Research challenges: Transceiver design; Increased FFT size, Resource management; Retransmission control; Overview of RF Requirements for LTE.

UNIT-III

KEY 4G TECHNOLOGIES

OFDMA; SOFTWARE DEFINED RADIO, Enhanced MIMO, HANDOVER AND MOBILITY, Enhanced MIMO: Single-User MIMO (SU- MIMO): MIMO adaptive switching scheme. LTE-Advanced main MIMO modes; Multi-User MIMO (MU-MIMO); Cooperative MIMO; Single- site MIMO: Advanced precoding concept. Downlink MIMO transmission; Uplink MIMO transmission.

UNIT-IV

COMP TRANSMISSION & RECEPTION

CoMP architecture: Centralized architecture, Distributed architecture, Mixed architectures: The CoMP schemes: Downlink, Uplink, Relays: Relay basic scheme, Relay deployment scenarios; Types; Duplexing schemes: Integration into RAN, Add-ons; Backhaul Design for Inband Relaying.

UNIT-V LTE VS WIMAX

WiMAX Overview: WiMAX Standards Evolution, WiMAX Deployment; Technology Comparison between LTE and WiMAX.

Introduction- Definition of a cyclic code- Example of a cyclic code- Polynomial Representation- Encoding by convolution- Establishing the cyclic property -Deducing the properties of a cyclic code- Primitive Polynomials- Systematic Encoding of cyclic codes- Syndrome of a cyclic code- Implementation of Encoding- Decoder operation - Multiple Error Correction-Example of Multiple Error Correction-Shortened Cyclic codes- Expurgated Cyclic codes-Cyclic codes for Burst - Error correction- Spectral properties of cyclic codes.

UNIT-III **BCH CODES**

Introduction- Specifying Cyclic codes by roots-Definition of BCH codes-Construction of BCH codes-roots and parity check matrices- Algebraic Decoding- BCH Decoding and the BCH Bound- Decoding in the frequency domain-Decoding examples for binary BCH codes- Polynomial form of the key equation-Euclid's method-Berlekamp- Massey Algorithm- Massey's minimum shift register synthesistechnique and its relation to Berlekamp's algorithm- A fast Berlekamp - Massey algorithm.

UNIT-IV REED SOLOMON CODES

Introduction- Generator Polynomial for a Reed Solomon Code-Time domain encoding for Reed Solomon Code-Decoding Reed Solomon Codes- Reed Solomon Code Decoding Example-FrequencyDomain Encoded Reed Solomon Code-Erasure Decoding- Generalized Minimum Distance Decoding- Welch-Berlekamp Algorithm- Singly Extended Reed Solomon Codes-Doubly Extended Reed Solomon Codes- Justeen codes, MDS codes, Alterant, Goppa codes.

UNIT-V CONVOLUTION CODES

Introduction- General properties of Convolutional codes- Generator Polynomials - Terminology- Encoder State Diagram- Distance Structure of Convolutional codes-Evaluating Distance and weight Structures-Maximum Likelihood Decoding- Viterbi Algorithm- General properties -Example of viterbi decodingissues arising- Practical implementations of viterbi decoding-Performance of Convolutional codes- Good Convolutional codes- punctured Convolutional codes- Applications of Convolutional codes- codes for multilevel modulations- Wozencraft's sequential decoding algorithm, Fann's algorithm.

UNIT-I INTRODUCTION

Test process and automatic test equipment, test economics and product quality, fault modeling.

UNIT-II DIGITAL TESTING

Logic and fault simulation, testability measures, combinational and sequential circuit test generation.

UNIT-III ANALOG TESTING

Memory Test, DSP Based Analog and Mixed Signal Test, Model based analog and mixed signaltest, delay test, IIDQ test.

UNIT-IV DESIGN FOR TESTABILITY

Built-in self-test, Scan chain design, Random Logic BIST, Memory BIST, Boundary scan test standard, Analog test bus, Functional Microprocessor Test, Fault Dictionary, Diagnostic Tree, Testable System Design, Core Based Design and Test Wrapper Design, Test design for SOCs.

UNIT-V LOADED BOARD TESTING

Unpowered short circuit tests, unpowered analog tests, Powered in-circuit analog, digital and mixed signal tests, optical and X-ray inspection procedures, functional block level design of in-circuit test equipment.

UNIT-I	INTRODUCTION TO SMART ANTENNAS	9 Hours
	ocessing for Wireless Systems, Key Benefits of Smart Antennas, Sm	
introductior	n, smart antenna configuration, SDMA, architecture of smart antenna systems	•
UNIT-II	APPLICATIONS OF SMART ANTENNAS IN MOBILE COMMUNICATIONS	9 Hours
Mobile cor	nmunication systems with smart antennas, Application of Antenna Array	rs to Mobile
Communica	tions, Beam Forming and Direction-of-Arrival Considerations.	
UNIT-III	SMART ANTENNAS TECHNIQUES FOR CDMA	9 Hours
	ent CDMA Spatial Processors, Coherent CDMA Spatial Processors and	_
Processing	Rake Receiver, Multi-User Spatial Processing, Dynamic Re-sectoring	Using Smar
Antennas, I	Downlink Beam forming for CDMA.	
UNIT-IV	OVERVIEW OF GPS & GPS SIGNALS	9 Hours
	of GPS- Global Positioning Systems: Basic concept, system architecture, s	
-	nt, GPS aided Geo-augmented navigation (GAGAN) architecture. Signal s	
spooting (A	S), selective availability, Difference between GPS and GALILEO satellite co	nstruction.
UNIT-V	GPS ORBITS AND SATELLITE POSITION DETERMINATION	9 Hours
GPS orbital	parameters, description of receiver independent exchange format (RINEX) -	-Observation
	avigation message data parameters, GPS position determination. GPS /	
antennas.		
	Total Hours	45 Hours
Text Book(s)

Course Name	SATELLITE	3	0	0	3	40	60	100				
	COMMUNICATION											
Course	PROFESSIONAL ELECTIVE	Syllabus Revision V.1.0						.1.0				
Category	COURSE -VII											
Pre-requisite	Basic knowledge of Antennas and Digital Communication											

Course Objectives:

The course should enable the students

- 1. To understand the basics of satellite orbits.
- 2. To understand the satellite segment and earth segment.
- 3. To analyze the various methods of satellite access.
- 4. To understand the applications of satellites.

Course Outcomes:

On completion of the course, the student will be able to

Course	Description	Highest
Outcom		Bloom's
es		Taxonomy
CO1	Understand the basic concepts of Satellite orbits using Kepler's laws.	K2
CO2	Space craft technology in space segment and Computation of link budget for	K2
	satellites to calculate received power.	
CO3	Understand the various earth station sub systems to transmit and receive	K2
	signals.	
CO4	Understand and analyze the different losses and noise in earth segment.	К3
CO5	Apply the different accessing techniques, encryption techniques to	K3
	communicate satellite systems.	

Correlation between Course Outcomes (COs) and Program Outcomes (POs):

UNIT-I	INTRODUCTION TO RADAR EQUATION	9 Hours						
Introduction	- Basic Radar – The simple form of the Radar Equation- Radar B	lock Diagram-						
Radar Frequ	encies – Applications of Radar – The Origins of Radar - Detection	of Signals in						
Noise- Rece	eiver Noise and the Signal-to-Noise Ratio-Probability Dens	ity Functions-						
Probabilities	of Detection and False Alarm- Integration of Radar Pulses- Radar C	Cross Section of						
Targets- Ra	dar cross Section Fluctuations- Transmitter Power-Pulse Repetition	on Frequency-						
Antenna Par	ameters- System losses – Other Radar Equation Considerations.							
UNIT-II	MTI AND PULSE DOPPLER RADAR	9 Hours						
Introduction	to Doppler and MTI Radar- Delay -Line Cancellers- Staggered F	ulse Repetition						
Frequencies	-Doppler Filter Banks - Digital MTI Processing - Moving Targe	et Detector -						
Limitations	to MTI Performance - MTI from a Moving Platform (AMIT) - Pulse	Doppler Radar–						
Other Dopp	ler Radar Topics- Tracking with Radar -Monopulse Tracking -Co	nical Scan and						
Sequential I	Lobing – Limitations to Tracking Accuracy - Low-Angle Tracking	- Tracking in						
Range - Ot	her Tracking Radar Topics - Comparison of Trackers - Automatic	Tracking with						
Surveillance	Radars(ADT).							
UNIT-III	DETECTION OF SIGNALS IN NOISE	9 Hours						
Matched -F	ilter Receiver - Detection Criteria - Detectors Automatic Detector	- Integrators -						
Constant-False-Alarm Rate Receivers - The Radar operator - Signal Management - Propagation								
Radar Waves - Atmospheric Refraction - Standard propagation - Nonstandard Propagation -								
The Radar A	Antenna - Reflector Antennas - Electronically Steered Phased Arra	ay Antennas –						

Phase Shifters- Frequency-Scan Arrays Radar Transmitters and Receivers - Introduction –Linear Beam Power Tubes - Solid State RF Power Sources - Magnetron - Crossed Field Amplifiers -Other RF Power Sources – Other aspects of Radar Transmitter.- The Radar Receiver - Receiver noise Figure – Super heterodyne Receiver - Duplexers and Receiver Protectors- Radar Displays.

UNIT-IV RADIO DIRECTION AND RANGES

9 Hours

Introduction - Four methods of Navigation .- The Loop Antenna - Loop Input Circuits - An Aural Null Direction Finder - The Goniometer - Errors in Direction Finding - Adcock Direction Finders - Direction Finding at Very High Frequencies - Automatic Direction Finders – The Commutated Aerial Direction Finder - Range and Accuracy of Direction Finders - The LF/MF Four course Radio Range - VHF Omni Directional Range(VOR) - VOR Receiving Equipment - Range and Accuracy of VOR – Recent Developments. Hyperbolic Systems of Navigation (Loran and Decca) - Loran-A - Loran-A Equipment - Range and precision of Standard Loran - Loran-C - The Decca Navigation System -Decca Receivers - Range and Accuracy of Decca - The Omega System

UNIT-VSATELLITE NAVIGATION SYSTEM9 HoursDistance Measuring Equipment - Operation of DME - TACAN - TACANEquipment -Instrument Landing System - Ground Controlled Approach System - Microwave Landing System(MLS) The Doppler Effect - Beam Configurations -Doppler Frequency Equations - Track

Stabilization - Doppler Spectrum - Components of the Doppler Navigation System - Doppler range Equation - Accuracy of Doppler Navigation Systems. Inertial Navigation - Principles of Operation - Navigation over the Earth – Components of an Inertial Navigation System - Earth Coordinate Mechanization - Strapped- Down Systems - Accuracy of Inertial Navigation Systems- The Transit System - Navistar Global Positioning System (GPS).

UNIT-	L	FUNDAMENTALS OF WAVELET TRANSFORMS										9 Ho	urs				

Vector Spaces – Properties– Dot Product – Basis – Dimension, Orthogonality and Orthonormality – Relationship Between Vectors and Signals – Signal Spaces – Concept of Convergence – Hilbert Spaces for Energy Signals- Fourier Theory: Fourier series expansion, Fourier transform, Short time Fourier transform, Time-frequency analysis.

UNIT-II MULTI RESOLUTION ANALYSIS

Definition of Multi Resolution Analysis (MRA) – Haar Basis – Construction of General Orthonormal MRA – Wavelet Basis for MRA – Continuous Time MRA Interpretation for the DTWT – Discrete Time MRA – Basis Functions for the DTWT – PRQMF Filter Banks.

UNIT-III CONTINUOUS WAVELET TRANSFORMS

Wavelet Transform – Definition and Properties – Concept of Scale and its Relation with Frequency – Continuous Wavelet Transform (CWT) – Scaling Function and Wavelet Functions (Daubechies Coiflet, Mexican Hat, Sinc, Gaussian, Bi Orthogonal) – Tiling of Time – Scale Plane for CWT.

UNIT-IV DISCRETE WAVELET TRANSFORM

Filter Bank and Sub Band Coding Principles – Wavelet Filters – Inverse DWT Computation by Filter Banks – Basic Properties of Filter Coefficients – Choice of Wavelet Function Coefficients – Derivations of Daubechies Wavelets – Mallat's Algorithm for DWT – Multi Band Wavelet Transforms Lifting Scheme- Wavelet Transform Using Polyphase Matrix Factorization – Geometrical Foundations of Lifting Scheme – Lifting Scheme in Z – Domain.

UNIT-V APPLICATIONS

Wavelet methods for signal processing- Image Compression Techniques: EZW–SPHIT Coding – Image Denoising Techniques: Noise Estimation – Shrinkage Rules – Shrinkage Functions – Edge Detection and Object Isolation, Image Fusion, and Object Detection.

UNIT-II	REFERENCE ARCHITECTURE	9 Hours
IoT Archite	cture-State of the Art – Introduction, State of the art, Reference	e Model and
architecture,	IoT reference Model - IoT Reference Architecture Introduction	n, Functional
View, Inform	nation View, Deployment and Operational View, Other Relevant	architectural
views. Real-	World Design Constraints- Introduction, Technical Design constra	ints-hardware
is popular ag	ain, Data representation and visualization, Interaction and remote c	control.
UNIT-III	IOT DATA LINK LAYER & NETWORK LAYER	9 Hours
	PROTOCOLS	
PHY/MAC	Layer(3GPP MTC, IEEE 802.11, IEEE 802.15), Wireless HAI	RT, Z-Wave,
Bluetooth L	ow Energy, Zigbee Smart Energy, DASH7 - Network Layer	r-IPv4, IPv6,
6LoWPAN,	6TiSCH,ND, DHCP, ICMP, RPL, CORPL, CARP	
UNIT-IV	TRANSPORT & SESSION LAYER PROTOCOLS	9 Hours
Transport La	yer (TCP, MPTCP, UDP, DCCP, SCTP)-(TLS, DTLS) – Session I	Layer-HTTP,
CoAP, XMP	P, AMQP, MQTT.	
UNIT-V	SERVICE LAYER PROTOCOLS & SECURITY	9 Hours
Service Lay	er -oneM2M, ETSI M2M, OMA, BBF - Security in IoT Proto	ocols – MAC
802.15.4, 6L	oWPAN, RPL, Application Layer.	
	Total Hours	45 Hours

Course Name	DISASTER MANAGEMENT	3	0	0	3	40	60	100
Course	OPEN ELECTIVE COURSE -I	Syllabus Revision V.1.0						
Category								
Pre-requisite	Basic Knowledge of Managemen	t						

Course Objectives:

The course should enable the students

- 1. To provide students an exposure to disasters, their significance and types.
- 2. To ensure begin to understand the relationship between vulnerability, Disasters, disaster prevention and risk reduction.
- 3. To gain a preliminary understanding of approaches of disaster risk reduction (drr).
- 4. To enhance awareness of institutional processes in the country.
- 5. To develop rudimentary ability to respond to their surroundings with potential disaster response in areas where they live, with due sensitivity.

Course Outcomes:

On completion of the course, the student will be able to

Course	Description	Highest
Outcom		Bloom's
es		Taxonomy
CO1	Basic knowledge and understanding of the analysis and design of	K2
	complex systems.	
CO2	Ability to apply software engineering principles and techniques.	K2
CO3	Design and implement innovative features in a development process	K4
CO4	To study the concept of disaster risk management in India.	K2
CO5	Understand the concept of disaster management.	K2

Definit	tion: I	Disast	er, Ha	zard,	Vulne	erabili	ity, Re	esilier	nce, Ri	isks – I	Disast	ers: T	ypes of	disast	ers –

Earthquake, Landslide, Flood, Drought, Fire etc - Classification, Causes, Impacts including social, economic, political, environmental, health, psychosocial, etc.- Differential impacts- in terms of caste, class, gender, age, location, disability – Global trends in disasters: urban disasters, pandemics, complex emergencies, Climate change- Dos and Don'ts during various types of Disasters.

UNIT-II APPROACHES TO DISASTER RISK REDUCTION (DRR) 9 Hours

Disaster cycle - Phases, Culture of safety, prevention, mitigation and preparedness community based DRR, Structural- non structural measures, Roles and responsibilities of-community, Panchayati Raj Institutions/Urban Local Bodies (PRIs/ULBs), States, Centre, and other stake-holders- Institutional Processes and Framework at State and Central Level-State Disaster Management Authority(SDMA)– Early Warning System – Advisories from Appropriate Agencies.

UNIT-IIIINTER-RELATIONSHIP BETWEEN DISASTERS AND91DEVELOPMENT91

9 Hours

Factors affecting Vulnerabilities, differential impacts, impact of Development projects such as dams, embankments, changes in Land-use etc.- Climate Change Adaptation- IPCC Scenario and Scenarios in the context of India - Relevance of indigenous knowledge, appropriate technology and local resources.

UNIT-IV DISASTER RISK MANAGEMENT IN INDIA

9 Hours

Hazard and Vulnerability profile of India, Components of Disaster Relief: Water, Food, Sanitation, Shelter, Health, Waste Management, Institutional arrangements (Mitigation, Response and Preparedness, Disaster Management Act and Policy - Other related policies, plans, programmes and legislation – Role of GIS and Information Technology Components in Preparedness, Risk Assessment, Response and Recovery Phases of Disaster – Disaster Damage Assessment.

UNIT-V	DISASTER MANAGEMENT: APPLICATIONS AND	
	CASE STUDIES AND FIELDWORKS	

9 Hours

Landslide Hazard Zonation: Case Studies, Earthquake Vulnerability Assessment of Buildings and Infrastructure: Case Studies, Drought Assessment: Case Studies, Coastal Flooding: Storm Surge Assessment, Floods: Fluvial and Pluvial Flooding: Case Studies; Forest Fire: Case Studies, Man Made disasters: Case Studies, Space Based Inputs for Disaster Mitigation and Management and field worksrelated to disaster management.

Category	-I							
Pre-requisite	Digital Communication							

Course Objectives:

The course should enable the students

- 1. To understand OSI security architecture and classical encryption techniques.
- 2. To acquire fundamental knowledge on the concepts of finite fields and number theory.
- 3. To understand various block cipher and stream cipher models.
- 4. To describe the principles of public key cryptosystems, hash functions and digital signature.

Course Outcomes:

On completion of the course, the student will be able to

Course Outcom	Dutcom							•			
es CO1	Understand the basic concepts of classical encryption techniques.	K2									
CO2	Understand and apply principles and techniques of number theory relevant to cryptography.	К3									
CO3	Apply modern algebra and number theory to understand block cipher and public key cryptography algorithm.	К3									
CO4	Understand and analyze the authentication functions and digital signatures.	K4									
CO5	Design and implementation of security systems using firewalls and intrusion detection system.	К5

UNIT-I INTRODUCTION & NUMBER THEORY									9 Hours						

Services, Mechanisms and attacks-the OSI security architecture-Network security model-Classical Encryption techniques (Symmetric cipher model, substitution techniques, transposition techniques, steganography).FINITE FIELDS AND NUMBER THEORY: Groups, Rings, Fields-Modular arithmetic- Euclid's algorithm-Finite fields- Polynomial Arithmetic – Prime numbers-Fermat's and Euler's theorem- Testing for primality -The Chinese remainder theorem- Discrete logarithms.

UNIT-II BLOCK CIPHERS & PUBLIC KEY CRYPTOGRAPHY 9 Hours

Data Encryption Standard-Block cipher principles-block cipher modes of operation-Advanced Encryption Standard (AES)-Triple DES-Blowfish-RC5 algorithm. Public key cryptography: Principles of public key cryptosystems-The RSA algorithm-Key management - Diffie Hellman Key exchange- Elliptic curve arithmetic-Elliptic curve cryptography.

UNIT-III HASH FUNCTIONS AND DIGITAL SIGNATURES

9 Hours

9 Hours

Authentication requirement – Authentication function – MAC – Hash function – Security of hash function and MAC – MD5 - SHA - HMAC – CMAC - Digital signature and authentication protocols– DSS – EI Gamal – Schnorr.

UNIT-IV	SECURITY PRACTICE & SYSTEM SECURITY	9 Hours					
Authenticati	Authentication applications – Kerberos – X.509 Authentication services - Internet Firewalls for						
Trusted Sys	Trusted System: Roles of Firewalls - Firewall related terminology- Types of Firewalls -						
Firewall designs - SET for E-Commerce Transactions. Intruder – Intrusion detection system –							
Virus and re	lated threats – Countermeasures – Firewalls design principles – T	rusted systems –					

Practical implementation of cryptography and security.

UNIT-V E-MAIL, IP & WEB SECURITY

E-mail Security: Security Services for E-mail-attacks possible through E-mail - establishing keys privacy-authentication of the source-Message Integrity-Non-repudiation-Pretty Good Privacy- S/MIME. IP Security: Overview of IP sec-IP and IP v6 -Authentication Header-Encapsulation Security Payload (ESP)- Internet Key Exchange (Phases of IKE, ISAKMP/IKE Encoding). Web Security: SSL/TLS Basic Protocol computing the keys- client authentication-PKI as deployed by SSL Attacks fixed in v3- Exportability-Encoding-Secure Electronic Transaction (SET).

Course Objectives:

The course should enable the students

- 1. To make the students understand the evolution of electronics in automobiles and basics of charging and starting system.
- 2. To provide student with knowledge on ignition and injection systems.
- 3. To make the students learn about various sensors and actuators for controlling engine parameters.
- 4. To acquaint students with various engine control systems.
- 5. To teach the students about various chassis and safety system operation and applications.

Course Outcomes:

At the end of the course, the student should be able:

Course Outcom	Description	Highest Bloom's
es		Taxonomy
CO1	Understand the evolution of automotive electronics and charging system	K2
CO2	Develop through basic knowledge about various ignition and injection systems.	K5
CO3	Analyze required sensors and actuators for an automotive application.	K4
CO4	Understand the automotive electronics for engine management system	K2
CO5	Acquire knowledge on the safety systems of the automobile.	K1

UNIT-I INTRODUCTION

Evolution of electronics in automobiles – emission laws – introduction to Euro I, Euro II, Euro III, Euro IV, Euro V standards – Equivalent Bharat Standards, Charging systems: Working and design of charging circuit diagram – Alternators – Requirements of starting system - Starter motors and starter circuits.

UNIT-II IGNITION AND INJECTION SYSTEMS

Ignition systems: Ignition fundamentals - Electronic ignition systems - Programmed Ignition – Distribution less ignition - Direct ignition – Spark Plugs. Electronic fuel Control: Basics of combustion – Engine fuelling and exhaust emissions – Electronic control of carburetion – Petrol fuelinjection – Diesel fuel injection.

UNIT-III SENSOR AND ACTUATORS

Working principle and characteristics of Airflow rate, Engine crankshaft angular position, Hall effect, Throttle angle, temperature, exhaust gas oxygen sensors – study of fuel injector, exhaust gas recirculation actuators, stepper motor actuator, vacuum operated actuator.

UNIT-IV ENGINE CONTROL SYSTEMS

Control modes for fuel control-engine control subsystems – ignition control methodologies – different ECU"s used in the engine management – block diagram of the engine management system. In vehicle networks: CAN standard, format of CAN standard – diagnostics systems in modern automobiles.

UNIT-V CHASSIS AND SAFETY SYSTEMS

3. 4.

Traction control system – Cruise control system – electronic control of automatic transmission – antilock braking system – electronic suspension system – working of airbag and role of MEMS in airbag systems – centralized door locking system – climate control of cars.

Course Code	BECF186OEF	L	Т	Р	С	IA	EA	TM
Course Name	REMOTE SENSING & GIS	3	0	0	3	40	60	100
Course	OPEN ELECTIVE COURSE -	Syllabus Revision V.1.0					.1.0	
Category	II							
Pre-requisite	Basic Knowledge of Science & Engineering							

Course Objectives:

The course should enable the students

- 1. To make the students understand the concepts, components and source of remote sensing.
- 2. To gain knowledge about different types of remote sensing platforms and sensors To explain the concept of satellite image interpretation.
- 3. To understand the applications of remote sensing in Civil Engineering
- 4. To introduce the fundamentals and components of Geographic Information System.
- 5. To provide details of spatial data structures and management, input and output processes. To explain the various case studies on application of integration of GIS and Remote Sensing.

Course Outcomes:

At the end of the course, the student should be able to:

-	At the end of the course, the student should be able to:

UNIT-I REMOTE SENSING

9 Hours

Definition – Components of Remote Sensing – Energy, Sensor, Interacting Body - Active and Passive Remote Sensing – Platforms – Aerial and Space Platforms – Balloons, Helicopters, Aircraft and Satellites – Synoptivity and Repetivity – Electro Magnetic Radiation (EMR) – EMR spectrum – Visible, Infra Red (IR), Near IR, Middle IR, Thermal IR and Microwave – Black Body Radiation - Planck's law – Stefan-Boltzman law.

UNIT-II EMR INTERACTION WITH ATMOSPHERE AND EARTH MATERIALS

9 Hours

Atmospheric characteristics – Scattering of EMR – Raleigh, Mie, Non-selective and Raman Scattering – EMR Interaction with Water vapour and ozone – Atmospheric Windows Significance of Atmospheric windows – EMR interaction with Earth Surface Materials – Radiance, Irradiance, Incident, Reflected, Absorbed and Transmitted Energy – Reflectance – Specular and Diffuse Reflection Surfaces- Spectral Signature – Spectral Signature curves – EMR interaction with water, soil and Earth Surface.

UNIT-III OPTICAL AND MICROWAVE REMOTE SENSING

9 Hours

Satellites - Classification – Based on Orbits – Sun Synchronous and Geo Synchronous – Based on Purpose – Earth Resources Satellites, Communication Satellites, Weather Satellites, Spy Satellites – Satellite Sensors - Resolution – Spectral, Spatial, Radiometric and Temporal Resolution – Description of Multi Spectral Scanning – Along and Across Track Scanners – Description of Sensors in Landsat, SPOT, IRS series – Current Satellites - Radar – Speckle – Back Scattering – Side Looking Airborne Radar – Synthetic Aperture Radar – Radiometer – Geometrical characteristics.

GIS – Components of GIS – Hardware, Software and Organizational Context – Data – Spatial and Non-Spatial – Maps – Types of Maps – Projection – Types of Projection - Data Input – Digitizer, Scanner – Editing – Raster and Vector data structures – Comparison of Raster and Vector data structure – Analysis using Raster and Vector data – Retrieval,

Reclassification, Overlaying, Buffering–Data Output – Printers and Plotters.

UNIT-V	MISCELLANEOUS TOPICS

9 Hours

Visual Interpretation of Satellite Images – Elements of Interpretation - Interpretation Keys Characteristics of Digital Satellite Image – Image enhancement – Filtering – Classification -Integration of GIS and Remote Sensing – Application of Remote Sensing and GIS – Urban Applications - Integration of GIS and Remote Sensing – Application of Remote Sensing and GIS – Water resources – Urban Analysis – Watershed Management – Resources Information Systems.

UNIT-I

OVERVIEW OF DATA ANALYTICS

9 Hours

Introduction to Big Data Analytics -definition -overview of big data - Characteristics– Importance of Big Data - data preparation -model planning,-Use cases-critical activities in each Phase of the lifecycle

Syllabus (2023-24)

B.E. (Electronics and Communication Engineering)

UNIT-II INTRODUCTION TO ANALYTIC TOOL 9 Hours

R Using R for Initial Analysis of the Data -Introduction to R programming, initial exploration analysis of the data using R - basic visualization using R – Basic Scripting-Data Set Analysis.

UNIT-III MINING DATA STREAMS

The Stream Data Model .- Sampling Data in a Stream -Filtering Streams - Counting Distinct Elementsin a Stream -Estimating Moments .- Counting Ones in a Window Link Analysis : Page Rank -Topic-Sensitive Page Rank -Link Spam -Hubs and Authorities.

UNIT-IV MAP REDUCE AND THE NEW SOFTWARE STACK 9 Hours

Distributed File Systems-Map Reduce Algorithms Using Map Reduce-Extensions to Map Reduce the Communication Cost Model-Complexity Theory for Map Reduce.

UNIT-V BIG DATA FROM THE TECHNOLOGY PERSPECTIVE 9 Hours

Introduction to Hadoop –Components of Hadoop –Application Development in Hadoop –Pig Hive- Jaql, Getting Data in Hadoop-copy Data-Flume, Other Hadoop Components-Zoo Keeper HBase- Oozie.

Total Hours 45 Hours

UNIT-II CAD FOR ADDITIVE MANUFACTURING

9 Hours

CAD Data formats, Data translation, Data loss, STL format.

UNIT-III ADDITIVE MANUFACTURING TECHNIQUES 9 Hours

Stereo- Lithography, LOM, FDM, SLS, SLM, Binder Jet technology. Process, Process parameter, Process election for various applications. Additive Manufacturing Application Domains: Aerospace, Electronics, HealthCare, Defence, Automotive, Construction, Food Processing, Machine Tools.

UNIT-IV MATERIALS

Polymers, Metals, Non-Metals, Ceramics. Various forms of raw material – Liquid, Solid, Wire, Powder; Powder Preparation and their desired properties, Polymers and their properties. Support Materials.

UNIT-V ADDITIVE MANUFACTURING EQUIPMENT 9 AND POST PROCESSING

9 Hours

9 Hours

Process equipment- design and process parameters Governing bonding mechanism Common faults and troubleshooting Process design Post processing: requirement and techniques Product quality, Inspection and testing Defects and their causes.

UNIT-I INTRODUCTION TO GPS

9 Hours

History of GPS – BC-4 System – HIRAN – NNSS – NAVSTAR GLONASS and GNSS Systems –GPS Constellation – Space Segment – Control Segment – User Segment – Single and Dual Frequency– Point – Relative – Differential GPS – Static and Kinematic Positioning – 2D and 3D – reporting Anti Spoofing (AS); Selective Availability (SA) – DOP Factors.

UNIT-II COORDINATE SYSTEMS AND SERVICES

9 Hours

Coordinate Systems - Geo Centric Coordinate System - Conventional Terrestrial Reference

System – Orbit Description – Keplerian Orbit – Kepler Elements – Satellite Visibility – Topocentric Motion – Disturbed Satellite Motion – Perturbed Motion – Disturbing Accelerations - Perturbed Orbit – Time Systems – Astronomical Time System – Atomic Time – GPS Time – Need for Coordination – Link to Earth Rotation – Time and Earth Motion Services.

UNIT-III CODES AND MODELS

C/A code; P-code; Y-code; L1, L2 Carrier frequencies – Code Pseudo Ranges – Carries Phases – Pseudo Ranges – Satellite Signal Signature – Navigation Messages and Formats – Undifferenced and Differenced Range Models – Delta Ranges – Signal Processing and Processing Techniques – Tracking Networks – Ephemerides – Data Combination: Narrow Lane; Wide Lane – OTF Ambiguity.

UNIT-IV PROPAGATION CONCEPTS

Propagation Media – Multipath – Antenna Phase Centre – Atmosphere in brief – Elements of Wave Propagation – Ionospheric Effects on GPS Observations – Code Delay – Phase Advances – Integer Bias – Clock Error – Cycle Slip – Noise-Bias – Blunders – Tropospheric Effects on GPS Observables– Multipath Effect – Antenna Phase Centre Problems and Correction.

UNIT-V GPS APPLICATIONS

Inter Disciplinary Applications – Crystal Dynamics – Gravity Field Mapping – Atmospheric Occulation– Surveying – Geophysics – Air borne GPS – Ground Transportation – Space borne GPS – Metrological and Climate Research using GPS.

					transr	nitter	and	transdu	icer -	Prim	arv	meas	suring		
	Difference between sensor, transmitter and transducer - Primary measuring elements -														

selection and characteristics: Range; resolution, Sensitivity, error, repeatability, linearity and accuracy, impedance, backlash, Response time, Dead band. Signal transmission -Types of signal: Pneumatic signal; Hydraulic signal; Electronic Signal. Principle of operation, construction details, characteristics and applications of potentiometer, Proving Rings, Strain Gauges, Resistance thermometer, Thermistor, Hot-wire anemometer, Resistance Hygrometer, Photo-resistive sensor.

#### UNIT-II INDUCTIVE AND CAPACITIVE TRANSDUCERS

9 Hours

Inductive transducers: - Principle of operation, construction details, characteristics and applications of LVDT, Induction potentiometer, variable reluctance transducer, synchros, microsyn. Capacitive transducers: - Principle of operation, construction details, characteristics of Capacitive transducers– different types & signal conditioning-Applications:- capacitor microphone, capacitive pressure sensor, proximity sensor.

#### UNIT-III ACTUATORS

9 Hours

9 Hours

Definition, types and selection of Actuators; linear; rotary; Logical and Continuous Actuators, Pneumatic actuator- Electro-Pneumatic actuator; cylinder, rotary actuators, Mechanical actuating system: Hydraulic actuator - Control valves; Construction, Characteristics and Types, Selection criteria. Electrical actuating systems: Solid-state switches, Solenoids, Electric Motors- Principle of operation and its application: D.C motors - AC motors - Single phase & 3 Phase Induction Motor; Synchronous Motor; Stepper motors - Piezoelectric Actuator.

#### UNIT-IV MICRO SENSORS AND MICRO ACTUATORS

**Micro Sensors**: Principles and examples, Force and pressure micro sensors, position and speed micro sensors, acceleration micro sensors, chemical sensors, biosensors, temperature micro sensors and flow micro sensors.

**Micro Actuators:** Actuation principle, shape memory effects-one way, two way and pseudo elasticity. Types of micro actuators- Electrostatic, Magnetic, Fluidic, Inverse piezo effect, other principles.

# UNIT-V SENSOR MATERIALS AND PROCESSING TECHNIQUES 9 Hours

Materials for sensors: Silicon, Plastics, metals, ceramics, glasses, nano materials. Processing techniques: Vacuum deposition, sputtering, chemical vapour deposition, electro plating, photolithography, silicon micro machining: Bulk silicon micromachining, Surface silicon micromachining, LIGA process.

	Total Hours 45 Hours

UNIT-I INTRODUCTION TO AI-AI TECHNIQUES								9 Hours							

Introduction – Foundations of AI, the History of AI –Intelligent Agent – Agent and Environment, Good Behavior: The Concept of Rationality, Nature of Environments, Structure of Agents- ProblemSolving Agents -Example Problems.

## UNIT-II SEARCHING TECHNIQUES- UNIFORMED SEARCH ALGORITHM

9 Hours

Uninformed Searching strategies-Breadth First Search, Depth First search, Depth limited search, Iterative deepening search, Bidirectional Search - Avoiding repeated States - Searching with Partial information –Informed search strategies – Greedy Best First Search-A* Search-Heuristic Functions- Local Search Algorithms for Optimization Problems-Local search in Continuous Spaces.

#### UNIT-III SEARCHING TECHNIQUES- ONLINE SEARCH ALGORITHM

9 Hours

9 Hours

9 Hours

Online Search Agents and Unknown Environments-Online Search Problems, Online Search Agents- Online Local search, learning in Online Search – Constraint Satisfaction Problems-Backtracking CSP, The Structure of Problems-Adversarial Search-Games, Optimal Decisions in Games, Alpha- Beta Pruning.

## UNIT-IV KNOWLEDGE AND REASONING

Logical agents – Knowledge Based Agents, The Wumpus World, Propositional Logic-A very simple Logic –First Order logic– inferences in first order logic – forward chaining – backward chaining – Unification – Resolution.

## UNIT-V PLANNING

Planning with state space search – Partial-order planning – Planning graphs – Planning and acting in the real world.

Total Hours 45 Hours

## UNIT-II SENSORS IN ROBOTICS

Position sensors (Piezo Electric sensor, LVDT, Optical Encoders)-Proximity (Inductive, Capacitive, Hall Effect & Ultrasonic), Range sensors (Laser Meters, Lighting Approach & Time of Flight Range Finder)-Image Processing & Analysis:-Image Data reduction-Feature extraction-Object Recognition.

## UNIT-III END EFFECTORS

Wrist configuration, Pitch, Yaw, Roll – Types of Grippers -Mechanical Grippers- Pneumatic and Hydraulic Grippers-Vacuum Cups-Magnetic Grippers –Two Fingered and Three fingered Grippers- Robot/End effectors Interface-Selection and Design Considerations.

## UNIT-IV ROBOT KINEMATICS

Forward Kinematics, Inverse Kinematics and the difference, Forward Kinematics and Inverse Kinematics of manipulators with two, three degrees or freedom (in two dimensional), four degrees of freedom (in three dimensional) – derivations. Homogenous transformation matrix, translational and rotational matrix, Denavit & Hartenberg representation.

#### UNIT-V ROBOT PROGRAMMING

Teach pendant programming, Lead through programming, Robot languages: VAL Programming, Motion command, Sensor command, End Effectors command. RGV, AGV, Implementation of robots in industries, various steps, Safety considerations for robot operations. Economic analysis of robots: Pay back methods, EUAC method and Rate of return method.

#### Syllabus (2023-24)

B.E. (Electronics and Communication Engineering)

UNIT-I	CLOUD COMPUTING PRIMER	9 Hours						
Cloud computing characteristics, cloud definition -cloud deployment models – private, public,								
hybrid and Community cloud, cloud services - SaaS, PaaS, and IaaS, Drivers for cloud								
computing, l	ouilding cloud infrastructure – a phased approach- virtualization and	its benefits-						
cloud econor	mics and challenges.							

#### UNIT-II

#### CLASSIC DATA CENTER (CDC)

9 Hours

Key elements of data center - application, DBMS, compute, storage and network, server clustering, RAID technology, intelligent storage system, DAS, FC-SAN – components, port type, addressing, and zoning, IP- SAN – iSCSI and FCIP, converged network - FCoE, NAS, object based and unified storage, business continuity terminologies, backup-recovery and duplication, local and remote replication, CDC monitoring and management, Information lifecycle strategy.

## UNIT-III VIRTUALIZED DATA CENTER (VDC)

9 Hours

Compute: Compute virtualization benefits, hypervisor types, virtual machine (VM) - resources, V M resource management, physical to virtual conversion – process, benefits. Storage: Storage virtualization benefits, storage for VMs, block and file level storage virtualization, virtual Provisioning – benefits and best practices, storage tiering. Networking: Network virtualization benefits, VDC network infrastructure components, VLANs, and Network traffic management techniques.

## UNIT-IV VIRTUALIZED DATA CENTER – DESKTOP AND APPLICATION

9 Hours

Desktop, application, and user state virtualization – benefits, tools, and deployment methods, Business Continuity in VDC:-Eliminating single points of failure, clustering, fault tolerance, and NIC teaming, backup and replication in VDC, VM templates and VM migration. Cloud Security:-Basic information security concepts, cloud security concerns and threats, security mechanisms in cloud at compute, storage, and network layer, Governance, Risk and compliance in Cloud.

#### UNIT-V CLOUD INFRASTRUCTURE AND MANAGEMENT 9 Hours

Cloud infrastructure framework -components, infrastructure management and service creation tools- processes – asset - configuration management, service catalog management, financial management, capacity, performance availability management, incident, problem and compliance management. Cloud Migration Considerations:- Considerations for choosing right application and cloud model, service provider specific considerations, cloud adoption phases, Financial and technical feasibility assessment, migration and optimization considerations.

Total Hours 45 Hours

Text Book(s)

1. Cloud Infrastructure and Services Student Guide - EMC Education Services- 2011.

Refe	rence Book(s)
1.	EMC IT's Journey to the Private Cloud: A Practitioner's Guide -2011.
2.	EMC IT'S "ON-RAMP" TO THE JOURNEY TO THE PRIVATE CLOUD Replat form to an Open Scalable Infrastructure-2011.
3.	EMC IT's Journey to the Private Cloud: Applications & Cloud Experience.
4.	EMC IT's Journey to the Private Cloud: Server virtualization.
5.	EMC IT's Journey to the Private Cloud: Backup & Recovery Systems.
6.	EMC IT's Journey to the Private Cloud: Virtual Desktop-2011. (Incl.Ref.no: 3, 4, 5, 6).

**Course Code** L Т Р С IA EA TM **Course Name BLOCK CHAIN** 3 0 40 100 0 3 60 TECHNOLOGY Course **OPEN ELECTIVE COURSE Syllabus Revision** V.1.0 Category -III **Pre-requisite** Basic knowledge of Data Communication **Course Objectives:** The course should enable the students 1. To understand the technology behind block chain. 2. To comprehend the issues related to block chain. 3. To study the real-world applications of block chain. **Course Outcomes:** At the end of the course the students will be able to Description Highest Course Bloom's Outcom Taxonomy es **K2** Understand the requirements of the basic design of block chain. **CO1** Identify the need of block chains to find the solution to the real-K2 **CO2** world problems. Summarize the working of block chain. K2 **CO3** Recognize the underlying technology of transactions, blocks, proof-K2 **CO4** of-work, and consensusbuilding. Design and implement new ways of using block chain for **K2 CO5** applications. **Correlation between Course Outcomes (COs) and Program Outcomes (POs):** 

					Program Specific Outcomes (PSOs)										
COs	PO 1	PO 2	PO 3	<b>PO</b> 4	PO 5	P 06	<b>PO</b> 7	PO 8	PO 9	PO 10	P 0 1 1	PO 12	PS O 1	PSO 2	PSO 3
CO1	S	-	-	-	-	-	-	-	L	L	-	Μ	-	М	-
CO2	S	-	-	-	-	-	-	-	L	L	-	Μ	-	М	-
CO3	S	-	-	-	-	-	-	-	L	L	-	М	М	М	-
CO4	S	L	Μ	-	-	-	-	-	L	L	-	Μ	-	М	-
CO5	-	S	S	М	-	-	-	-	М	Μ	-	М	М	М	-
UNIT-	I INTRODUCTION 9 Hours												rs		
Blockchain concepts, evolution, structure, characteristics, a sample blockchain application, the blockchain stack, benefits and challenges.															

UNIT-II	<b>BLOCKCHAIN: HOW DO THEY WORK?</b>	9 Ho
---------	--------------------------------------	------

What is a Blockchain? Public Ledgers, Blocks in a Blockchain, Blockchain as public ledgers, Transactions, Distributed consensus. Building a block: Elements of Cryptography-Cryptographic Hash functions, Merkle Tree, Elements of Game Theory.

#### UNIT-III BLOCKCHAIN ARCHITECTURE AND USE CASES

9 Hours

Design methodology for Blockchain applications, Blockchain application templates, Blockchain application development, Ethereum, Solidity, Sample use cases from Industries, Business problems.

#### UNIT-IV SMART CONTRACTS

9 Hours

Smart contract, structure of a contract, interacting with smart contracts using Geth client and Mist wallet, smart contract examples, smart contract patterns.

#### UNIT-V DECENTRALIZED AND REAL WORLD APPLICATIONS 9 Hours

Dapps, implementing Dapps, Ethereum Dapps, case studies related to Dapps, Internet of things, healthcare.

Total Hours 45 Hours

Text Book(s)

1. Blockchain applications: a hands-on approach, Bahga A., Madisetti V., VPT, 2017. **Reference Book(s)** 

- 1. Beginning Blockchain, A Beginner's Guide to Building Blockchain Solutions, Bikramadity Singhal, Gautam Dhameja, Priyansu Sekhar Panda, Apress, 2018.
- 2. Blockchain A Practical Guide to Developing Business, Law, and Technology Solutions, Joseph J. Bambara and Paul R. Allen, McGraw Hill, 2018.
- 3. Blockchain enabled Applications Vikram Dhillon, David Metcalf and Max Hooper, Apress, 2017.
- 4. The Business Blockchain: Promise, Practice, and Application of the Next Internet Technology, William Mougayar, Wiley, 2016.
- 5. Blockchain Science: Distributed Ledger Technology, Roger Wattenhofer, Inverted Forest Publishing; 3rd edition, 2019.
